

Streamline how you manage data and processes while capturing all of your relevant business information in the powerful Enviance System.

The Power of Enviance with the Flexibility of a Custom Solution

Enviance Apps are interfaces that sit on top of the Enviance Platform allowing customers to tailor their user's Enviance experience. This means customers can create interfaces that are designed for a particular device or for a specific business process. These custom interfaces can simplify the user experience resulting in:

- Reduced time for end user training
- Faster deployments
- Decreased time to realize solution value

Enviance Apps can replace custom one-off systems allowing companies to consolidate and track relevant data in one centralized database, reduce the cost of system maintenance, eliminate duplicate data entry, and enable the aggregation of data for trending and reporting. All using the power of *trusted Enviance technology*.

USE AN EXISTING Enviance App

With Enviance Apps, businesses also have the flexibility to utilize off-the-shelf Enviance App solutions (such as the AuditApp) that simplify how companies track and manage standard business processes. Enviance has created these targeted solutions with a focus on quick deployments and a simplified user experience. These off-the-shelf Enviance Apps can be added to a customer's existing Enviance System allowing customers to incorporate the data from these Apps into their larger Enviance Solution. This enables customers to combine, analyze and report data from their Enviance Apps together with data from their other existing solutions.

NEED MOBILITY? No Problem

Enviance Apps can be used on any HTML5 browser, enabling you to access the same application in the field via any mobile device (*iPad, iPhone, tablets/phones on Google Chrome*) and at your desktop.

Benefits:

- Reduce the cost, time and complexity of custom applications
- Tailor interfaces to reduce errors, improve accuracy and increase ease of use
- Quickly adapt applications to your changing business needs
