incidentapp

Easily enter, analyze, and integrate your incidents when and where they happen.

Introducing the Latest Addition to the Enviance Suite of EHS Apps

The IncidentApp Integrates EHS risk management best practices throughout your organization's workflow to reduce business disruption and improve performance, enhances your corporate reputation with internal stakeholders, regulators and the community, and allows you more control over potential risks throughout your organization to further establish a culture of safety, stewardship, and awareness.

With the new IncidentApp, you'll be able to log and investigate incidents, analyze root-causes, identify trends and guard against future incidents.

Key elements include:

- Intelligent and easy to use data entry form to guide users through the process of collecting information related to an incident.
- Simple searches to give you quick access to the details of all of your current and past incidents and preventive/corrective actions.
- Facility metrics data collection screen to facilitate access to values such as employee hours, vehicle miles traveled or other facility data points you choose.
- Dynamic dashboards to analyze all incidents across any level within your organization then drill down to specific details of an incident.
- Extract your data from the System, choose from standard OSHA Reports or create your own reports for your unique business needs.
- Drag-and-drop Form Designer to enable you configure the data collection forms with the fields and rules that fit your business.

STREAMLINE Your Entire Incident Workflow

Enviance combines all of these powerful features into one easy-to-use application designed to streamline your entire incident workflow.

- Real time reporting
- Incident tracking and compliance
- Communication with stakeholders
- Future risk assessment and prevention

The IncidentApp *powered by Enviance*. Instant, intelligent and comprehensive information, at your fingertips.
