

Managing all of your water requirements can be overwhelming. Enviance has the power and flexibility to manage your entire water management program.

Water is essential for operating your business. Don't drown in a sea of data and information.

Responsible water and wastewater management requires constant monitoring, inspections, and reporting. These activities generate lots of data that must be submitted to regulatory agencies and stakeholder organizations via DMR's, TRI Form R's, water supply, and sustainability reports. In addition, you need to ensure compliance with the obligations of your storm water pollution prevention (SWPPP) and prevention control and counter-measure (SPCC) plans.

With all this responsibility, you can't afford to miss deadlines or submit incorrect data and information. The reliability, accuracy, flexibility and power of the Enviance Environmental Enterprise Planning (ERP) System will easily support your water and wastewater permits and programs. The world's largest organizations rely on Enviance for all of their water management needs and requirements, including wastewater, storm water, drinking water and groundwater.

STREAMLINE Water Management Processes

The Enviance Environmental ERP System streamlines data input, collection, storage, and retrieval enabling you to view and report data for your permits and programs such as NPDES, pre-treatment, water supply, and sustainability.

- Create an inventory of all your requirements
- Assign tasks and workflows to personnel for timely completion of critical activities
- Seamlessly input laboratory data and inspection results
- View results with real-time dashboards and print submission-ready reports
- Access the system anytime, anywhere via an Internet connection

IMPROVE Responses to Permit Exceedances

The Enviance Environmental ERP System automates the detection of permit exceedances by sending real-time data warnings and notifications to take correction actions. You can establish internal and regulatory limits as part of your requirements inventory. When data are entered into the System,

they are compared to the limits to determine whether you have any exceedances. The System sends your personnel warnings and notification describing any exceedances and assigning tasks designed to resolve any water or wastewater issues. In addition, you can complete workflows or event logs that document relevant information associated with permit exceedances.

Enviance provides the right balance of efficient automation and human discretion. The business decides which potential excursions require reporting while the Enviance System issues, escalates and tracks to completion all required tasks and corrective actions related to an excursion. Detailed explanations of each potential excursion can even be stored within Enviance for fast reference to each compliance decision.

DEMONSTRATE Compliance

Enviance solutions allow you to pro-actively demonstrate compliance with the requirements and obligations associated with your permits and plans. You can establish any number of tasks, workflows, or event logs with notification reminders, and specific information for recordkeeping. Once your tasks are set up, you automatically have an "at a glance" calendar of compliance

activities. You can also track self-assessment, inspections, audit and spill/release findings, and corrective actions to closure with automated workflows. In addition, a document library allows your organization to store electronic compliance documentation (e.g., photos, checklists, permits, etc.) in the System which can then be associated with requirements and tasks.

The Enviance System provides the ability to create any number of ad hoc and pre-configured compliance reports, which can incorporate a broad set of search, sort, and screening criteria including tabular and graphical reports. Reports may be viewed in HTML or exported directly to Microsoft Excel. Users can also create custom report templates to export data from the System into an Excel format designed to “print, sign and send” your DMR or upload it to your regulator’s electronic reporting system. The Enviance System also supports configurable Dashboards so you can view compliance status and performance trends.

SAVE Time and Money

With more than 10 years of environmental expertise, the Enviance Environmental ERP System is the industry’s first platform developed using cloud computing technology. Cloud technology enables Enviance clients to access water and wastewater data enterprise-wide from a single, centralized database ensuring that it’s available—anytime, anywhere. All it takes is an Internet connection to access data 24x7, regardless of location and time of day.

The unrivaled functionality of Enviance’s cloud-based system reduces costs and complexity at every step – from collecting and collating data to report generation. The Enviance Environmental ERP System offers the following cost and time saving benefits:

- Eliminate spreadsheet errors by deploying a consistent, reliable, and standardized database management solution across your organization
- Maintain a central repository that collects and stores data once, and reports it multiple times - reducing the time, cost, and risk associated with handling data multiple times
- Deploy verifiable and transparent data collection and calculation methodologies

- Easily connect other information systems reducing the inefficiency associated with manual transcription and aggregation
- Realize the lowest Total Cost of Ownership (TCO) with proven cloud computing, which deliver these benefits faster and more efficiently than any environmental management software solution available

ENVIRONMENTAL ERP

Environmental ERP meets the unique and evolving business need to measure, understand, report on and mitigate a company's impact on the environment – providing a comprehensive understanding of environmental performance within the broader business context.
