

The Workflow App Builder enables you to define your own process and transform it overnight into a mobile enterprise application with no programming required.

Transformative. Flexible. Speedy. Mobile.

Create a mobile application to meet your unique processes using the mighty new Enviance Workflow App Builder.

The Workflow App Builder enables you to define your own workflow and transform it overnight into a mobile enterprise application with no programming required. Eliminate costly training by placing end users inside an application built specifically for them.

Rapidly convert paper and/or email processes to mobile solutions that clearly define each step with your own dynamic forms that fit your business process. Provide alerts to responsible parties and produce a clear audit trail of the process history.

Key elements include:

- Flexible workflow engine allows you to define your own work process including the forms, steps, participants, and email notifications.
- Powerful form designer to easily create fully responsive forms to ensure the user only sees/enters information that is applicable for any given item.
- Simple search to easily see the status and contents of each item.
- Drilldown dashboards allowing rapid analysis and issue identification.
- Permissions settings to ensure end users only see the data that is relevant to them.
- Simple interface allowing users to access the App from a mobile device.
- Document management for files and photographs associated with your process.

VISIBILITY Without Resistance

Paper, email, and spreadsheet-based processes are everywhere in many organizations. Moving them to an enterprise system has traditionally been expensive, time consuming, and resisted by end users. With the Workflow App Builder, organizations can get rapidly deployed visibility while delivering time-saving mobility and intelligent forms to their employees and contractors.

PROCESS Accountability

Ensuring adherence to a process is no longer a time-intensive activity. Applications created using the Workflow App Builder allow organizations to quickly identify the current/next steps in any process and who is responsible.

Need mobility? No problem. Apps created using the Workflow App Builder can be used on HTML5 browsers, enabling you to access your data in the field via a mobile device (such as an iPad or iPhone) and at your desktop.
