

Renowned Physiatrist Relies on Winning Combination of EPAT and PRP to Treat More Patients, More Effectively

Using the CuraMedix OrthoPulse Ultra 200 radial device in conjunction with PRP, Dr. Snowball:

- Improved patient outcomes
- Increased patient referrals and expanded reputation
- Increased revenue from a new source
- Attracted new patients
- Helped patients avoid cortisone, medication and surgery

About

Dr. Halina Snowball M.D. is a physiatrist who specializes in the treatment of pain management and mobility through a non-surgical, integrated medical approach that leads to long-term healing. Dr. Snowball has won consecutive Top Doctor awards and is a Castle Connolly award winner.

The Challenge

Acclaimed Physiatrist and Acupuncturist Dr. Halina Snowball, M.D. wanted to create better outcomes for patients struggling with acute and chronic pain resulting from various musculoskeletal conditions.

Many had tried and were frustrated with conventional treatments they had received elsewhere. For her highly active patients, surgery and physical therapy required too much risk and downtime. For others, cortisone injections had further damaged the joint and surrounding tissue, and had provided only a “band-aid” solution. **Dr. Snowball’s patients came to her in search of non-invasive treatment that would have lasting or permanent effects and help them remain active.**

The Solution

After talking with her peers and considering the clinical evidence for EPAT, Dr. Snowball knew the **OrthoPulse Ultra 200 radial device from CuraMedix** would help her achieve her goals of helping patients feel better quickly, without cortisone, surgery, risk or downtime.

Dr. Snowball also combined EPAT with PRP (Platelet-Rich Plasma) to intensify the effects and accelerate healing. This enabled her to treat the soft tissue around the joint, as well as the joint itself, to reverse the problem and eliminate her patients’ pain. **This combined approach has resulted in treatment that is faster, extremely reliable and highly effective.**

“The best results I’ve ever had are when EPAT is used in conjunction with PRP. Treating the tissue around the joint is equally important as treating the joint itself. As a doctor, you want your patients to get better...and they do.”

Dr. Snowball uses EPAT in conjunction with PRP to intensify the effects and accelerate healing.

The Results

Dr. Snowball has seen numerous benefits from integrating both EPAT and PRP into her practice. Offering a non-invasive treatment option has opened new doors for existing patients who want to explore regenerative medicine solutions and address their pain without needles or medication.

EPAT has also boosted referrals and helped Dr. Snowball attract new patients. Many come in requesting EPAT and PRP after learning about it online or from friends. Additionally, Dr. Snowball touts that EPAT “pays for itself,” and has resulted in economic gains for her practice. Not only that, but more of her patients leave her office satisfied that they have found a natural, lasting solution to their pain.

“It is a more natural way for treating patients without needles and without medications, which is a huge appeal to patients. And then the next level to that is that we get really good results! My patients who do the treatment are cured. If they continue to be aggressively athletic, they might come back in a year or more for more treatment, but in general, EPAT seems to provide a reversal of the problem.”
