OfferUp

Opening a New Office and Running Access Control from Okta

The OfferUp Story

After moving into a new 75,000 square foot space, OfferUp decided it was time to discuss new access control systems. Having used Brivo in the past, they wanted to explore the next-generation of cloud-based access control providers. Ideally, one that could integrate natively with their identity access management system.

How Sequr Helped

OfferUp relies on Okta to manage their identity access management. Sequr's ability to provision access control to their physical buildings from Okta was a game changer for them. Another key factor in the decision-making process was that Sequr runs on nonproprietary hardware, that other vendors also use, and is willing to own that risk.

+ Native integration with Okta automates the provisioning management process and reduces complexity

+ Runs on nonproprietary hardware

+ Compatibility with HID cards, fobs, mobile devices, and wearables provides flexibility

"With one sign into Okta we were able to give physical access to a new employee and also block access when someone switched roles or moved on. It was a killer feature and that was a game changer for us."

Jonathan Spiva
Director of IT

OfferUp

How Sequr Helped

With one sign on, OfferUp can provision and deprovision access control to their building through Okta. Everything is automated and runs from the cloud, saving the company time, effort, and stress of managing employee access.
