

Prebill

Sophisticated high production claims editing software. Automates compliance checking and submission of clean claims via EDI direct from provider to payer.

Automating claims compliance checking (edits) is not enough. Choosing a product that provides the most accurate edits is key.

Prebill has the most accurate standard edit packages in the industry. Customers can create custom edits in-house.

Accurate standard and custom edits allow Prebill to produce the

cleanest claims possible with minimal human intervention.

Claims that need to be touched require much less time to fix. This frees up FTEs for other tasks.

Prebill stops the rejection/denial cycle and speeds up the entire claims process.

User-friendly reporting and analytic tools. Export to Excel.

Getting the most out of the healthcare revenue cycle means getting claims out quicker, cleaner, at a lower overall cost and, most importantly, getting those claims paid at the fastest and highest rate possible.

Easy to use Claim and Edits work queues. Click an item in the queue and the claims display in the edit correction view. Click on the edit item and you are taken to the claim field that is the issue.

Easy to copy and split claims. Any change to a claim will trigger a re-edit before it can be saved. Drill down to all claim detail.

Work queue format is easy to adjust, claims can be re-assigned from one biller to another using work-flow manager.

Clean claims are sent directly to payers. Avoids clearinghouse cost, slow service, lost/misdirected claims and higher denials from claims aggregation.

- Reduces the cost of producing clean claims
- Increases cash flow
- Decreases A/R
- First-pass acceptance >99%
- Provides an audit trail
- Works with any EMR/HIS

Key Specifications

Parallel distributed processing

Changes to custom edits or standard edits can be deployed while users are working. No need to have everyone out of the system. Less problems and easier on IT infrastructure.

SQL Transactions are used to make sure all business and claim processing is accurate and in balance. Proprietary RAM data structure cache to improve editing speed.

Send/Receive return receipt tracking and monitoring. Re-send when return receipt is not received by sender.

Nutanix high performance and high availability hosts the

virtual environments in our Data Center. Easy to expand and provides the best performance.

Easy to use Edit Explorer shows the edit hierarchy and facilitates changes, additions or deletions.

A master log is kept of all customer inventory and balancing, explorer interface easily tracks production and monitoring of claims submissions.

Powerful batch editing can retroactively remove errors, re-assign claims or re-edit claims.

Claim file interfaces built and tested in-house. Customers own claim data used to test with payers for direct EDI approval.

Consultants work with IT staff to install and test on customers data server. Ensures software functions at the highest level.

“Having a system flexible enough to build our own edits is key ... everyone’s CDM is different and Prebill allows you to manipulate standardized charge data to meet the adjudication requirements of payers while simultaneously providing an audit trail or crosswalk back to the original services.”
