

**Calling all Optometrists, Resident Optometrists and Optometry Students.
We need your help!**

We are conducting an observational clinical research project entitled **Timed Rebound Experiment (T-REX)** through the American Academy of Optometry's Public Health Section and Fellows Doing Research Special Interest Group. The aim is to obtain time to successful self-measurement of intraocular pressure (IOP) utilizing rebound tonometry with Icare HOME. The study will take place in the Exhibit Hall at the Academy 2018 meeting in San Antonio, TX, **November 7-9**. Volunteers will complete in-person Icare HOME Tonometer Certification the Wednesday morning of Academy, and then help carry out the experiment by working a 2-hour shift in the Exhibit Hall.

This is a great opportunity to receive one-on-one training with a new device, Icare HOME, which was FDA cleared in 2017 for patients to self-measure IOP outside of regular clinic hours.

Investigators of this project include Drs. Nadine Furtado, Timothy Tsang, Ruth Hyatt, Katie Jensen and Darcy Eberle, all with diverse backgrounds in Academia, Private Practice, and Veterans Health Administration.

If you are attending Academy and would like to volunteer and participate in this year's experiment, please email Dr. Nadine Furtado at nfurtado@uwaterloo.ca by **October 1, 2018**.

And please be sure to visit the booth this year! Thank you for your attention and consideration.
