CleanSweep Archive SuiteApp for NetSuite

NetSuite ETL and Data Replication Service

Introducing CleanSweep Archive, a new ETL tool for NetSuite to synchronize your data automatically with your own cloud database.

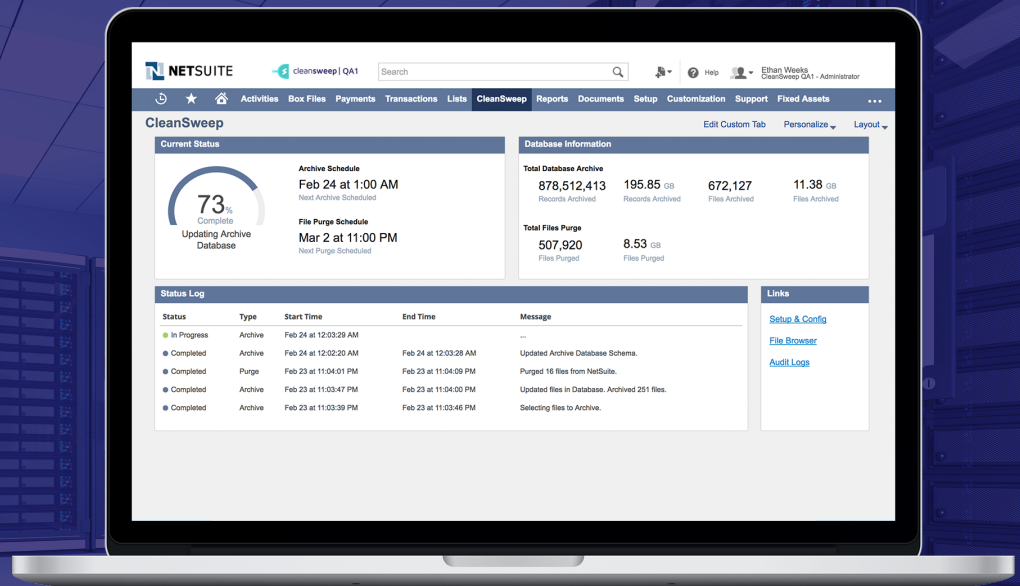

The CleanSweep Archive SuiteApp developed by Techfino is used to replicate all NetSuite records, transactions and files to a cloud-hosted SQL database. CleanSweep keeps your database up to date without having to write your own ETL scripts.

*Data Warehouse not included

**CleanSweep Archive requires SuiteAnalytics Connect to connect NetSuite to your database.

Copyright © Techfino LLC 2017. All rights reserved. CleanSweep is a registered TradeMark of Techfino in the United States.

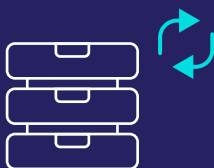

FEATURES

- Easy to install and use with minimal IT support required
- Turn-key ETL process to synchronize all NetSuite data to your own read-only cloud-hosted SQL database
- Automatic and frequent updates ensure your custom reports and data warehouse are always up to date
- Robust: Distributed, fault-tolerant, scalable cloud hosting

BENEFITS

- **Rapid Reporting:** Much faster than connecting directly to NetSuite
- **Business Continuity:** Protects against accidental data loss, provides disaster recovery, and ensures business continuity
- **Regulatory Compliance:** Allows customers to remain in compliance of audit regulations for the storage and retrieval of data
- **BI Strategy:** Enable custom third-party reporting and Business Intelligence tools to interact with your NetSuite data

NetSuite End of Life

Need to retire a NetSuite account?

With CleanSweep Archive now you can safely back-up all data in your NetSuite account to our low-cost cloud to later retrieve historical data after you sunset NetSuite.
