

# SOFTWARE TEST AUTOMATION ENGINEER WORKING STUDENT/INTERN

Work for RE'FLEKT - the leading experts in Augmented and Mixed Reality solutions and software in Europe. You can help us lead the way with this new disruptive technology. Join our international team!

RE'FLEKT seeks an enthusiastic working student Test Automation Engineer who is highly passionate about digital technology. In this role, you will support the implementation of test automation for our innovative products in an agile environment. You will be part of an energetic and motivated team.

## What your tasks are:

- Automate mobile test cases using core Java with Appium for non-native (Unity based) mobile apps
- Perform root cause analysis for issues uncovered by test results
- Build, deploy and maintain automated tests
- Support manual testing when required
- 

## Who we are looking for:

- Bachelor's degree in Computer Science, Engineering or related IT fields
- Some experience in software QA, manual testing or development
- Experience in software/mobile app test automation for iOS and Android frameworks (e.g. Calabash, Appium, Selenium WebDriver) would be a big plus
- Experience in Agile/SCRUM development methodology
- Responsible, team-oriented, self-starter, proactive with excellent analytical and troubleshooting skills
- Fluent in English

## Why join us?

- Work at a fast growing startup in the area of Augmented and Mixed Reality technology
- Extraordinary projects and well-known international customers and brands
- Agile and quick decision-making culture
- International and dynamic team of engineers, designers and nerds
