MAIN FEATURES

KNOWLEDGE

Instant access to knowledge provides employees and customers the information they need to work faster and better.

CONNECTION

Our one-touch "Intelligent Routing" technology immediately connects technicians to the right support expert.

REPORTING

Overview of all open, in-progress and closed incidents. Filter capabilities simplify the search for issues and support cases.

WHITE LABEL

Brand REFLEKT Remote with your corporate identity. Easily brand applications with your unique logo, colors and design.

5 KEY ADVANTAGES

1

Eliminate expert travel costs with 'see what I see' remote functionality.

2

Connect instantly to the right expert and information.

3

Reduce down-time costs with real-time expert support.

4

Improve communication with AR annotations on live video stream.

5

Build knowledge base with incident management and reporting.

EXPERT DIAGNOSIS & GUIDANCE

When broken parts arrive at a manufacturer's repair center, on-site technicians often lack the training and experience to immediately diagnose and fix the problem. Experts and specialized personnel frequently need to fly in to make repairs. Using REFLEKT Remote, on-site technicians can now contact experts to diagnose and provide guidance on-demand and in real-time, even after-hours. This significantly reduces travel costs, expert labor requirements and customer downtime.

EQUIPMENT INSPECTIONS

A large industrial equipment distributor's customers have to make frequent trips to the service center for equipment component inspection. These visits typically require travel and increase equipment downtime. Using REFLEKT Remote, customers perform component inspection without leaving their office, saving time and money, and improving component failure and review analysis.

GRID TECHNICIAN SAFETY

Utility field service technicians have high turnover rates with ~40% of the workforce, leaving the company on an annual basis. Worker safety is a top priority, since this line of work has high risks for injury and even death. Using REFLEKT Remote, expert technicians can remotely guide new hires in the field to ensure they complete their jobs safely and efficiently.
