

THERE IS A BETTER WAY TO MANAGE CLAIMS AND ENROLLMENT

Don't Spend Hundreds of Hours Each Year Plugging the Holes of Your Benefits Administration Software

With hundreds of different HR platforms on the market not including software used by insurance carriers, Third party administrators (TPAs) struggle with employers sending files in hundreds, if not thousands of different formats. But the answer does not lie in a new benefits administration platform, especially one custom built for a TPA. There are tools and software that can work with existing claims management software, even custom-built platforms, to automate the process beyond a templated approach.

Each day do you find yourself struggling with the following?

- Manually entering plans into the benefits administration system
- Manually entering employees into the benefits administration system
- Manually entering employers into the benefits administration system
- Manually entering claims from paper EOBs
- Manually manipulating enrollment and eligibility files to import into the benefits administration system
- Receive files from carriers that have to be reviewed to ensure there are no duplicate claims before entering

How long does it take you to make these adjustments for each file? Even if it only takes 15 minutes per file, if you process 50 files each week you are looking at over 600 hours per year spent on adjusting the data.

Before you spend another year and hundreds of hours managing claims and enrollment, know that there are tools available to work with your current benefits administration platform to improve efficiency and cut the waste from your processes.

Want to save hundreds of hours each year from tedious and repetitive tasks? TPA Stream is focused on automating health insurance administration for third party administrators and revenue cycle managers. For more information about how we can help reduce administrative costs, please visit TPAStream.com.
