

Training Centre

Provide orientation and site induction training simply and efficiently over the web

Are you currently providing orientation or other training to contractors from a slide presentation or DVD in a classroom? With Training Centre, you can provide training simply and efficiently over the web.

Training Centre is a web-based learning management system that seamlessly integrates with BROWZ providing a simple platform to deliver and document high-quality training for your contractors at the employee level. With Training Centre, you can provide critical orientation, safety, or other corporate training to your contractors over the web before they ever arrive onsite.

Training Simplified

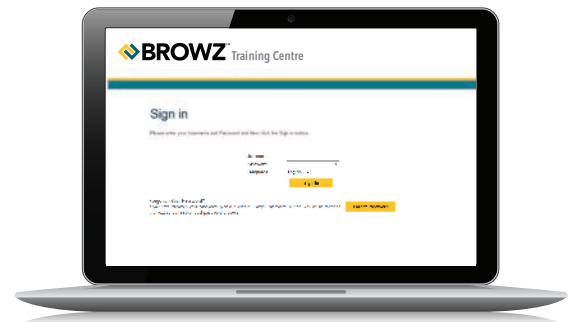

The process is simple. You provide the material and training content you'd like presented at your selected sites, and we'll send the appropriate training to contractors who work at those sites. Contractors at the employee level will receive an invitation to access Training Centre and complete the training. Training Centre supports multiple languages allowing the contractor to take the course in their native language, ensuring that workers understand critical safety protocols.

Once logged into Training Centre, contractors will be presented with their required training. After taking the training, they will be required to complete a brief quiz to ensure comprehension. Pass/fail scores are stored on the contractor's employee level record within BROWZ. When the contractor shows up on-site, their record will reflect whether or not they have completed and passed the training allowing or denying access to your site.

Learning Management System

Training Centre is a robust learning management system with features including:

- Web-based delivery of training
- Integration with BROWZ
- Configurability to site-specific requirements
- Individual training plans with completion certifications
- Multiple language support
- Easy access to required training resources
- Training renewal reminders
- Documented training history
