PAINTING PROCESSES

PRODUCT REQUIREMENTS

The root of the word process is "proceed" and refers to:

THE SEQUENCE OF ACTIVITIES

as well as

**THE OPERATING METHOD
TO BE FOLLOWED**

The quality of a product is never a random factor. It is the result of a painting process and depends upon:

MATERIALS USED

different types of substrates and paint generate a finished product with different characteristics

PROCESSES IMPLEMENTED

different cycles and/or painting systems generate different types of finish

**PRODUCT REQUIREMENTS
THAT ONE INTENDS TO ACHIEVE**

since "quality" is a relative concept, this can be achieved more easily if the set requirement is low.

PAINTING PROCESSES

PARAMETERS

A production process such as a "painting cycle" or "painting system" consists of:

A SERIES OF OPERATIONS

whose outcome is influenced by

A SERIES OF PARAMETERS

that affect the result.
