

## RPM Rear Projection Mount

The RPV Rear Projection Mount (RPM) is a custom Free Standing Rear Projection Mount designed with minimal depth allowing the projector to be out of sight, creating a high resolution, quality image. This Single or Double Mirror Bounce rpm Mount is comprised of 45mm x 45mm Bosch Based Aluminum Extrusion using either a 2-Axis or 6-Axis alignment projector cradle. The 6-Axis allows Forward/Back, Left/Right, Elevation, Tilt, Roll, and Yaw adjustment. The rpm Mount can have leveling feet with +/- 1.5" Adjustment and/or casters. The mirror management system uses 94% Reflective First Surface Glass Mirror(s). The rpm Mount will be designed to display: 4:3, 16:9, 16:10, 1.89:1, or any other aspect ratio required.

We conduct Factory Certified Testing (FCT) for your projects. An FCT involves attaching the display(s) to the custom mount, ensuring fit and finish of the final display. We fully stage your custom solution to ensure a smooth installation, and to validate the manufacturer's display specification and optics.

### Features

- Precision 6-axis adjustable cradle
- Includes multipoint mirror fine-tuning system
- Tight footprint, compact design
- Compatible with any projector(s)
- Free standing structure

### Construction

- Fixbloc & T-bolt assembling joinery without welded components for ease of installation
- EZ Leveling feet (usable leveling range: +/- 1.5")
