

RPM MicroTiles® Leveling Base & Pedestal

RP Visual Solutions (RPV) presents another custom display solution for Christie® MicroTiles®. For those seeking temporary or free-standing MicroTile displays, RPV's adjustable leveling base and pedestal is the ideal solution. Our leveling base is designed to allow easy leveling of a first row of tiles, regardless of environmental imperfections. Once the primary row is leveled using Christie's leveling feet, additional rows can be easily added and leveled. This adaptable solution allows for adjustment from below, utilizing screws and not shims.

For Permanent Installations, the bases can be as small as one wide, with no limitation on length. For temporary or rental applications, modules are available in 1x1, 2x1, & 3x1. Modules can also be combined together to create 6x1 or wider arrays. Should a proper surface not be available, RPV's MicroTile pedestal is an ideal surface to attach the leveling feet to. This free-standing custom structure can be equipped with leveling feet or casters. Crafted from 45mm x 45mm extrusion, the RPV pedestal is hand made for each order.
