

## RPPM - Panel Flex Mount

The RPPM Panel Flex Mount is the most robust LARGE flat panel wall mount available in the market place today. This heavy-duty, steel fabricated mount attaches a flat panel to any load bearing wall. The mount extends out from the wall up to 34", allowing a technician or end user to physically get behind the mount for cable connecting and other maintenance. The mount articulates left and right to enhance the viewing experience and for ease of installation and service. If the wall is not load bearing, alternative mounting options are available.

The RPPM Panel Flex Mount is CNC laser cut from precision formed 3/16" cold roller steel (CRS). This robust material ensures stability—especially in touch environments, while meeting manufacturer ventilation specifications. Vertical and horizontal center marks on the wall mounting weldment enable easy installation, while M16x40mm safety bolts prevent the display from dismounting. A pull-pin retention system holds the display securely in the home position, and allows for easy access to the rear of the display during installation or when service is required.

### Accessories

RPPM Panel Flex Mount options include accessory bracket mounts to hold Loudspeakers, Source Devices, or Cameras, creating a truly versatile mount. These accessory mounts can be located at the sides, top, or below the panels. Touch Overlay Bezel with up to 32 touch points and Custom Cladding can be added.
