

INSTANTLY REPORT ISSUES

IF YOU'RE ALREADY USING PULSE
FOR FACILITIES MANAGEMENT,
**SCOUT MIGHT BE JUST
THE TICKET**

Scout enables users to easily report issues directly to the FM team, straight from their smartphone.

Fast and simple. Immediately captures issues with photos, encouraging users to report faults as soon as they are detected.

Reduces time and cost by eliminating the need for maintenance requests to be captured through multiple channels such as phone calls and emails.

Feeds seamlessly into Pulse. Users can request issues on the web or via the app, with all requests fed into Core Pulse, and progress updates provided to users via email notifications.
