

EiMbedded Expertise

"We place exceptional talent at your fingertips, resulting in new specialist knowledge and insights for your team."

Why We Are, Who We Are

What do you do when you need specialist contractors, but can't source them fast? Perhaps you are unsure about the exact skills you require?

This is a common challenge facing organisations who deliver a variety of high value projects, and it cannot always be solved through traditional labour recruitment or by secondment of engineering consultants.

Instead, it requires specialist combined methodology, access to a pool of uniquely skilled professionals and a drive for assisting companies to excel with the talent they need, when they need it. It requires the backing of deep industry knowledge and a modern approach to delivering industrial solutions.

Embedded Expertise evolved out of client demand, to not only help source but also help place appropriately skilled contractors into your own business.

Connecting People to Solve Problems

Connecting people is at the core of everything that Embedded Expertise does. By doing so, the company offers solutions to real challenges surrounding technology, project delivery and the speed of digital change.

A pool of credible and highly experienced experts are on hand to provide independent solutions to projects, while in-house expertise is also available on demand from Australia's leading industrial automation and control services provider SAGE Automation and custom digital solutions provider Nukon.

Working under this unique, hybrid business model means Embedded Expertise has all of the integrated expertise necessary to fully understand what a client needs and offer a 'real person' solution, however complex it may be.

Embedded Expertise also carries out payroll, OH&S, compulsory insurances and contractor timesheet management.

Introducing New Capability

Embedding highly skilled contractors into your team fosters opportunities for knowledge transfer, innovations and new perspectives.

Each Embedded Expertise contractor comes with years of unique technical experience as well as the ability to adapt and thrive in any project or business.

As proven, versatile individuals in highly demanding and critical engineering situations, Embedded Expertise's contractors will not only help you to complete your project, but they'll also share their own insights and experience in the process. Such arrangements often have a positive impact on bottle necks and office politics that could otherwise impede critical projects.

Connected

Our deep network of industry relationships is underpinned by genuine care for our employees, contractors and clients.

Responsive

Our matching service is agile and responsive, regardless of how diverse our client's needs are.

Experienced

We have decades of experience sourcing technical talent, both for ourselves and for our clients, which means you'll always get fit-for-purpose and fit-for-culture talent.

"Connecting high calibre contractors with our clients."

About Us

Embedded Expertise combines 20 years of sourcing, interviewing and networking with 30 years of project delivery to a broad range of sectors in the technical field.

As a member of the SAGE Group we have proven experience in sourcing the best-fit contractors across the defence, transport, resources, utilities and manufacturing industries.

The SAGE Group brings together the brightest people and the best technology to create smarter, safer cities and workplaces.

SAGE Group of Brands

Embedded Expertise

Embedding the best technical experts into your business

SAGE Automation

Industrial automation design, delivery and support

NUKON

Transforming your data into whole-of-business insights

NSAG IMPS Solutions

Monitoring and control technology for our naval vessels

Skills Lab

Building your team's Industry 4.0 capability

Client Testimonial

"In November 2017 we requested a specialist ITS Engineer. We were quickly offered an experienced engineer who immediately started on one of our projects. He completed that initial project successfully and has since joined another project. He fitted in with what we needed technically and culturally, working effectively as one of our own. This has been a really good engagement for Transurban, and I would recommend Embedded Expertise on the back of this still successful solution to our resourcing challenge."

- Joshua Till,
Engineering Manager Qld, Transurban

Candidate Testimonial

"Embedded Expertise has been highly professional and honest about my role. Now, 11 months into the position their staff remain very close to me and we have met several times to review how the role is going and to make sure I am still enjoying it. I have attended various functions and I feel Embedded Expertise has genuinely cared about the alignment being 'right'. I have worked on many contracts and have never felt such a genuine level of interest and care. I would highly recommend them".

- Mia Oldfield,
Automation Coordinator, FMCG
