

Forensic Logic Crime Gun Initiative

Reduce violent crime with enhanced crime gun intelligence

Forensic Logic's Crime Gun Initiative helps combat violent crime by integrating your existing point solutions (e.g., gunshot location, gun tracing, ballistics association and more) into a common analytics platform to enable intelligence-led policing.

Chiefs and Sheriffs are measured by the reduction in the number of violent crimes reported. While extremely useful, the tools that currently exist to help combat violent gun crime, such as ATF's NIBIN and eTrace, do not go far enough to assist law enforcement in generating actionable insights.

These tools have not reached their full potential due to missing recovery information at the time of gun trace submission, erroneous data in the submissions, delayed lead generation and a lack of comprehensive use.

Forensic Logic LEAP SEARCH™ provides a simple search platform that automatically finds associations between people, locations, vehicles, telephone numbers, firearms and more. It aggregates cross-jurisdictional data into a national data network, making it easily searchable.

LEAP SEARCH helps to eliminate the challenges departments face by:

- Seamlessly integrating all information systems residing in an agency
- Automating submissions to eTrace and visualizing NIBIN results
- Layering data with RMS firearm entries, gunshot location information, NIBIN reports, firearm traces and more
- Producing timely, complete and actionable leads

As a result, you can expand your search, find the information you need more easily and solve domain-specific crimes more quickly.

Tight integration with NIBIN, eTrace and ShotSpotter

LEAP SEARCH can be seamlessly integrated with NIBIN, eTrace and ShotSpotter so you can submit and investigate violent crime information much more quickly. Firearm information can be traced the moment it is entered into your local Records Management System or Property System.

BENEFITS

Access critical information regarding violent gun crime within a single platform

Search across all applications and participating agency information systems

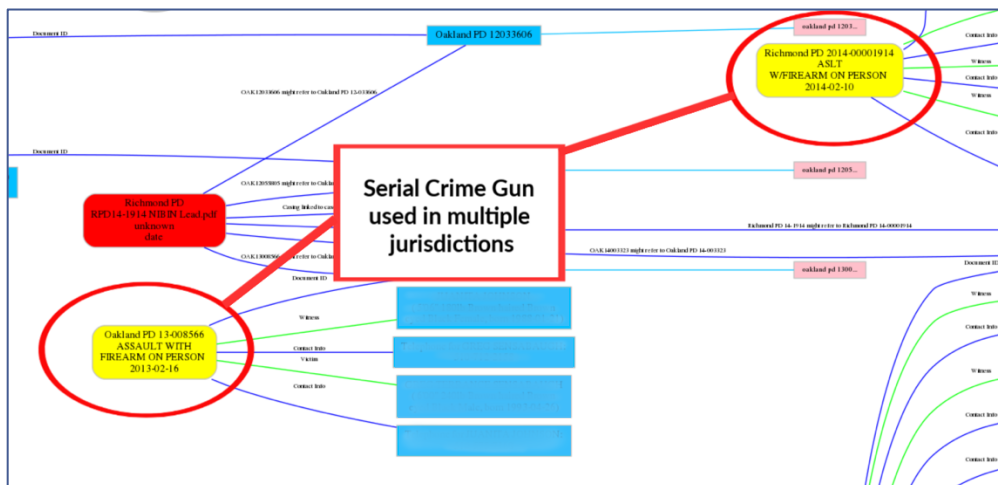

Simplify comprehensive and timely gun tracing and crime analysis

Accelerate your investigative leads with ballistics data hits received from NIBIN system

Enable real-time alerts and notifications so you know the second you get a hit

Measure results with Crime Gun CompStat Report and Dashboard

In addition, our solution under development will soon notify agencies of inaccurate firearm information contained in incident reports and property systems before transmittal to ATF for tracing. The When the ATF National Tracing Center receives gun trace submissions from our system, optional recovery data requested but often omitted from tracing forms will be automatically included.

Quickly view a NIBIN link chart within LEAP SEARCH.

Aggregate all firearm recovery information prior to submission to ATF.

For more information

Forensic Logic COPLINK deploys the largest, most powerful network of users, information and technology in American law enforcement. Powered by the most advanced search and analysis technology in the industry, we give our users the information they need to keep themselves and their communities safe. To learn more, visit www.forensiclogic.com.

KEY FEATURES

NIBIN hits are automatically associated with serial incidents including full incident narratives

Timeline, hotspot and geospatial analysis to help you quickly identify patterns

Dashboards illustrating gunshot location, calls for service for firearm-related calls, and firearm-related incidents and arrests

A variety of visualization tools, including link charts, one-click heat maps and 3-D visualizations, interactive geospatial rendering of incidents, interactive tag clouds and timelines

Automated submission of documents (activities) involving firearms tracing to the ATF
