SERVICE WEEKLY INSPECTION CHECKLIST

Please use the attached checklist to perform weekly service inspections on generator set equipment.

Before beginning any service, please conduct the following steps:

- 1. Perform lockout/tagout procedures before performing pre-start checks.
- 2. Refer to owner and operator manual for correct specifications.

DESCRIPTIONS:

Date Record the date of the inspection.

Ambient Temp Record air temperature around generator.

Oil Level Record the level from the oil dipstick and the amount of oil added to the engine if

it was needed.

Coolant Level Record level of coolant in the radiator and add approved coolant, if needed.

Heaters Check inlet and outlet hose temperature to verify operation.

Belts Visually inspect belts for damage or fraying.

Verify the **engine control** is in the **OFF** position.

Battery Charger Visually inspect battery charger to verify operation. If equipped with a display,

verify charge rate. If equipped with LEDs, verify correct LEDs are lit.

Battery Levels and Cables Verify battery(s) are full of acid, cables are tight, and battery posts clean.

Leaks: Oil, Water, Fuel Check all hoses and connections for dripping fluids. If needed, tighten hose

clamps to contain leaks.

Amps Record the amp reading when unit is running with load.

AC Volts Record the AC volt reading when unit is running with load.

Frequency Record the hertz reading when unit is running with load.

Oil Pressure Record the oil pressure when unit is running with load.

Coolant TempWhen unit is running with load, record the coolant temperature reading once

stabilized.

DC Volts Record control panel DC voltage reading.

RTM Record the Running Time Meter total before each test. Variances will show run

time between inspection exercises.

ATS Automatic Transfer Switch mark as **OK**, if test performed properly.

Maintenance Contact Maintenance technician performing inspections should initial in this box.
