Standardized Tool – An assessment tool that has been appropriately normed and validated for the population in which it is used. The name of the age appropriate standardized depression screening tool utilized must be documented in the medical record. Examples of tools for the depression assessment include, but are not limited to:

Adolescent Screening Tools (12-17 years)

Patient Health Questionnaire for Adolescents (PHQ-A), Beck Depression Inventory-Primary Care Version (BDI-PC), Mood Feeling Questionnaire (MFQ), Center for Epidemiologic Studies Depression Scale (CES-D), Patient Health Questionnaire (PHQ-9), Pediatric Symptom Checklist (PSC-17), and PRIME MD-PHQ2

Adult Screening Tools (18 years and older)

Patient Health Questionnaire (PHQ-9), Beck Depression Inventory (BDI or BDI-II), Center for Epidemiologic Studies Depression Scale (CES-D), Depression Scale (DEPS), Duke Anxiety- Depression Scale (DADS), Geriatric Depression Scale (GDS), Cornell Scale or Depression in Dementia (CSDD), PRIME MD-PHQ2, Hamilton Rating Scale for Depression (HAM-D), and Quick Inventory of Depressive Symptomatology Self-Report (QID-SR)

Perinatal Screening Tools

Edinburgh Postnatal Depression Scale, Postpartum Depression Screening Scale, Patient Health Questionnaire 9 (PHQ-9), Beck Depression Inventory, Beck Depression Inventory–II, Center for Epidemiologic Studies Depression Scale, and Zung Self-rating Depression Scale

Follow-Up Plan – Documented follow-up for a positive depression screening must include one or more of the following:

- Additional evaluation for depression
- Suicide Risk Assessment
- Referral to a practitioner who is qualified to diagnose and treat depression
- Pharmacological interventions
- Other interventions or follow-up for the diagnosis or treatment of depression

NOTE: Pharmacologic treatment for depression is often indicated during pregnancy and/or lactation. Review and

	<p>discussion of the risks of untreated versus treated depression is advised. Consideration of each patient’s prior disease and treatment history, along with the risk profiles for individual pharmacologic agents, is important when selecting pharmacologic therapy with the greatest likelihood of treatment effect.</p> <p>Numerator Instructions: All components should be completed once per visit per patient and should be documented in the medical record as having been performed during the measurement period.</p> <p>Numerator Options:  Performance Met: Depression assessment documented as positive using a standardized tool AND a follow-up plan is documented  OR  Performance Met: Depression assessment using a standardized tool is documented as negative, no follow-up plan required  OR  Performance Not Met: No documentation of depression assessment, reason not given  OR  Performance Not Met: Depression assessment documented as positive using a standardized tool, follow-up plan not documented, reason not given</p>
