

A low-angle, close-up photograph of a soldier inside a military vehicle. The soldier is wearing a helmet with a night vision device and is looking through the sights of a mounted machine gun. The machine gun is mounted on a heavy metal frame. The interior of the vehicle is visible, showing various mechanical components and a circular hatch. The lighting is dramatic, with a bright sun flare in the upper center of the frame. The overall tone is dark and industrial.

CREATORS OF PRECISION

"When our new brand was launched, it naturally aroused much interest. Who was working on this project? Who were the technicians and engineers who make up Victrix Armaments? Who was managing the project? But most of all, who was really behind this ambitious venture? Indeed, who could take on such a major challenge?"

These are all valid questions but, is it not possible to truly understand the importance of our brand simply by asking who and how many are working on it?

I now welcome the opportunity to answer as many of these questions as I can and also to convey the real impetus behind our Company.

Behind Victrix Armaments are those most passionate about precision shooting.

Behind Victrix Armaments are individuals working at the highest level in the military arena, true experts in their particular field.

Behind Victrix Armaments are technicians and specialists in precision engineering and design who are prepared to explore all segments of their craft and expertise.

Why? After years acting as strategic partners to a large number of equipment manufacturers and particularly arms-producing companies and brands, we realised that it was now time for us to demonstrate our ability to manufacture a product without compromise and to honour our idea of precision firearms.

This is the core aim of Victrix Armaments – the will and determination to develop and manufacture new and safe generation of firearm systems for both sporting and military use without compromise.

Behind Victrix Armaments, are the men and women who have made all this possible. We are Victrix Armaments; we are creators of precision."

Giuseppe Valtorta
Founder

**PASSION ACCURACY
AND PERFECTION.**

**THESE ARE THE THREE MAIN
VALUES OF VICTRIX ARMAMENTS**

At Rottigni Officina Meccanica, a company with over 45 years of experience in high precision engineering, we have developed unique manufacturing processes, which result in extremely close tolerances unparalleled in the firearms industry.

Victrix pride and experience: Where 45 years of traditional craftsmanship dovetails with modern technology.

WHAT MAKES VICTRIX ARMAMENTS DIFFERENT

At Victrix Armaments, we see ourselves as unique within the firearms industry, with the exception of the match grade barrel, all of the other components of the rifle have been designed and manufactured inside our company.

The advantage to this, of course, is that we are not reliant on other manufacturers for supply, quality and functionality. In maintaining this degree of control, we have analysed specific materials for their mechanical qualities and incorporated them into the design and manufacture of our rifles.

INNOVATION AND DESIGN.

Every Victrix rifle is born in our in-house 3D modelling design department, where from inception to completion, each and every component is checked for its aesthetic design and functionality.

MECHANICAL WORKING.

Our team of precision engineers and craftsmen have at their fingertips the most modern and sophisticated five axis CNC machining centres, spark erosion and EDM wire cutting equipment available to them.

Our actions are worked out directly from billet on high-technological CNC machining centres, to accomplish very low geometrical and dimensional tolerances and meet extremely high-quality standards. The alloy steel used allows to achieve high mechanical specifications. Treatment processes are carefully checked as they ensure long-lasting performance standards.

All actions single shot as well as those with magazines are equipped with a three-lug bolt thus assuring the highest precision.

REVOLUTIONISED INSPECTION & ANALYSIS.

Our highly skilled and qualified technicians, using state-of-the-art measurement and test equipment guarantee the accuracy of every component.

Our laboratory is equipped with computerized tridimensional checking machining such as DEA, microscopes, roughness and roundness testers, tools for the analysis of hardness as well as manual measuring instruments. Testing and calibration measurements of all instruments and samples are performed in SIT laboratories.

IT'S ALL IN THE DETAIL.

Attention to detail is paramount in the production of our precision rifles.

All of our components come together in our rifle building department, where each component is lovingly put together, with the emphasis on attention to detail, by our craftsmen, to produce what is known as the Victrix Precision Rifle. Victrix commands an unparalleled level of precision throughout its range.

We go straight to the heart of perfection.
