TRANSFORMYX IP TELEPHONY HARDWARE AND SOFTWARE

Transformyx IP telephony solution serves as a premise based alternative to traditional telephone systems and services. Our solution delivers voice transmission via IP over LAN & WAN networking infrastructure for both small businesses and large enterprises with multiple locations, mobile workers and unique technology needs.

Transformyx delivers an IP PBX communications solution which includes basic voice calling and voicemail, unified messaging, multi-media conferencing, and unified communications functionality – all without the added costs or management issues of those old-school phone systems or the constraints of a public cloud-based PBX.

The strategic partnership of hardware and software solutions allows any size organization to consume an enterprise class of service without the significant cost associated with traditional voice systems.

Transformyx has worked to bring our customers best-in-class handsets at a fraction of the cost of traditional voice systems.

By combining our hardware and software, you create an ultra-modern, unified communications solution that's also affordable.
