Validate Installation

Lesson Plan:

+ Review the key steps to inspect the site and confirm site readiness for ChargePoint Home station installation

Site Survey, Planning and Preparation

Site Survey	WiFi coverage validation
	Identify location
	Mounting and Model Selection
Site Plan	Document station model and location to be installed
	Document electrical and construction work to be performed
Site Preparation	 Electrical Work (Plug Version) – panel, breakers, wire pulls, outlet, station install (optional)
	Electrical Work (Hardwired) – panels, breakers, wire pulls, station install

Site Survey

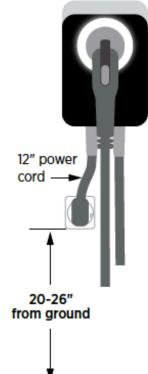

- Every installation requires a site survey to be completed
- Information gathered from the site survey is used to determine best location for installation.

 Determines if a WiFi extender is needed at the site.

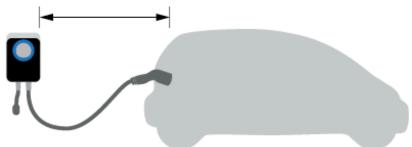

The NEMA outlet should be located 20-26" from the ground.

The power cord is only 12" long (as per National Electric Code (NEC) for EV chargers) so make sure the installation location of the station is close enough for the cord to reach down and plug into the NEMA outlet (the cord will not bend to allow for the station to be installed next to it). Refer to the **Installation Template** included with the station.

Make sure the homeowner has chosen an installation location that allows the length of charging cable to reach their car while still providing some slack.

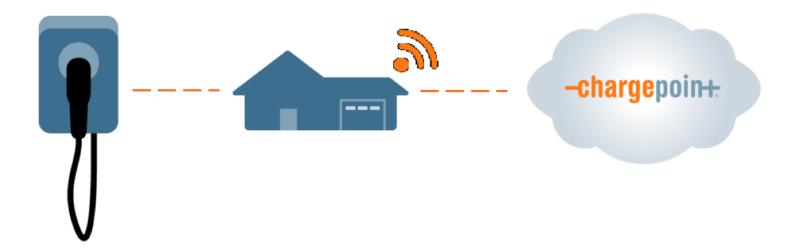

Charging cable reaches car without any tautness

When should a WiFi Survey be performed?

- + WiFi Surveys are not optional!
- + Performed prior to installation after preferred location has been chosen

- + Remedial work or corrective action may be required if WiFi survey is not conducted as recommended by ChargePoint
- + The installer is responsible for any remedial work resulting from WiFi survey not performed as recommended

How to verify WiFi coverage

+ To check WiFi coverage in the installation location, download App from iTunes or Play Store that measures dBm strength (i.e. Wifi Analyzer).

Locate Network name

- + Ideal signal strength: -85 dBm or higher
- + If signal strength is -85 dBm or lower, a WiFi Extender is recommended.

Recommended WiFi Extenders

NETGEAR N300

NETGEAR AC750

TP-LINK RE200

+ All routers are 802.11bgn and AC compatible

Site Plan

+ Varies from location to location but always will include:

Site Plan

- 1. Determine optimal location of charging station installation
- 2. Service and Panel upgrades based on existing infrastructure
- 3. Breaker layout, wire sizing, and run plan

Site Preparation for Installation

- Must be completed before actual station installation
- + The installation site must be prepared:
 - Conduit runs
 - Service upgrades
 - Panel upgrades
 - Power wire pulls
 - Outlet install
- All work must meet local and national codes

ChargePoint Home 12: 16A Station
Panel needs 240V 20A service.
NEMA 6-20 outlet installed ground facing up.

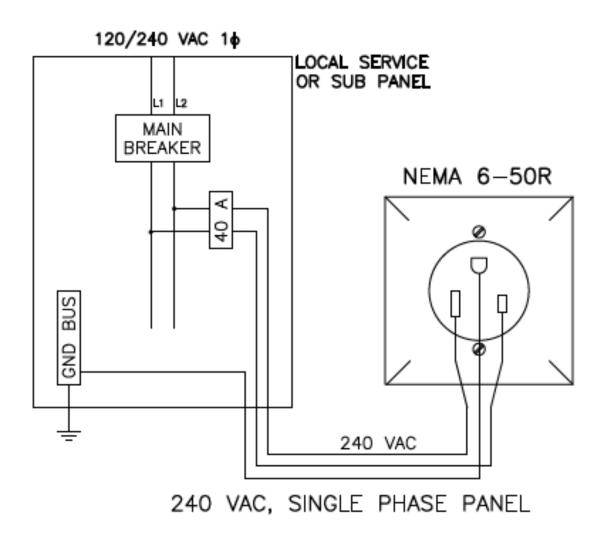

ChargePoint Home 25: 32A Station
Panel needs 240V 40A service.
NEMA 6-50 outlet installed ground facing up.

Station Wiring – Plug Version

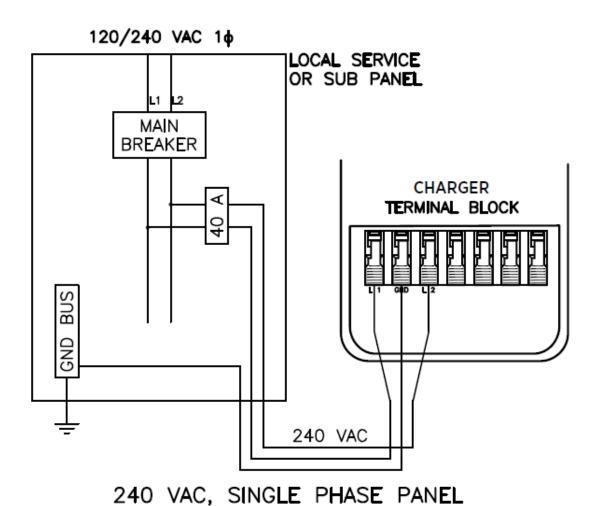

-chargepoin+

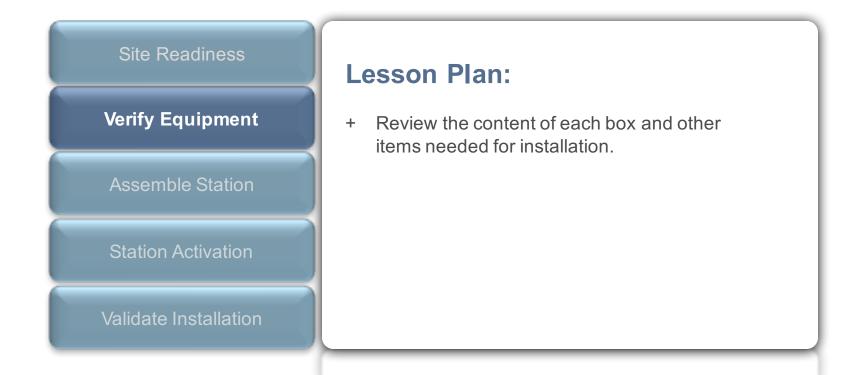

12" power cord -20-26" from ground

- Neutral is not required at the outlet
- Install outlet with ground facing up

Station Wiring – Hard Wired Version

- Use ¾" conduit
- Use appropriate fittings for connection
- Strip wire ends to ½"
- Insert wires fully into charger terminal block

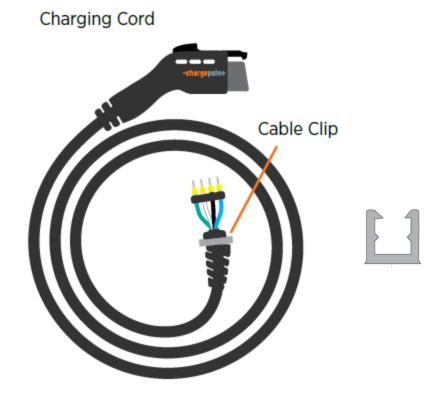

What's in the box

- -chargepoin+
- + Product will ship with 2 boxes (Charging Station and Cable box)
- + Note: Input cable will not be included for Hard Wired stations

Charging Station Box:

Install Guide Installation Template Charger Body ChargePoint*Home Installation Guide Wire Cover Outer Cover 3/8" Driver Bit (3) 2 X 1/4" Lag Screws 3/16" Drill Bit

Charging Cord Box:

Other items you will need

For Plug version:
NEMA 6-20 or 6-50
240V outlet, installed ground facing up

Pencil

ChargePoint
Mobile App

Coin

Download on the App Store

Requirements to activate the Home Station

- + WiFi and Bluetooth
- + iOS or Android Phone
- ChargePoint mobile app (free)
- + ChargePoint Account (free)

ChargePoint Mobile App

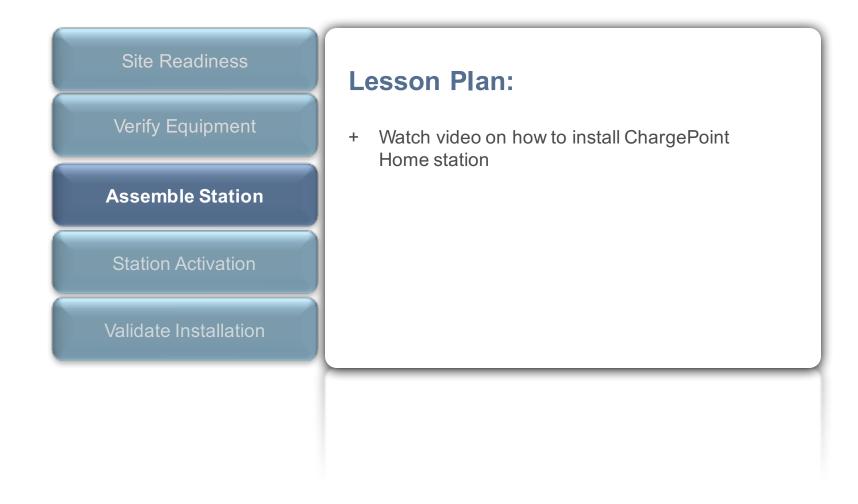

Safety

DANGER: RISK OF SHOCK

Turn off circuit breaker to 240V outlet. Do not restore power to the outlet until installation is complete. Failure to follow these instructions could result in shock or electrocution.

Site Readiness **Lesson Plan:** Learn why it is important activate the ChargePoint Home station Assemble Station Review the key steps to activating the station using your smart phone **Station Activation**

After Installation Overview

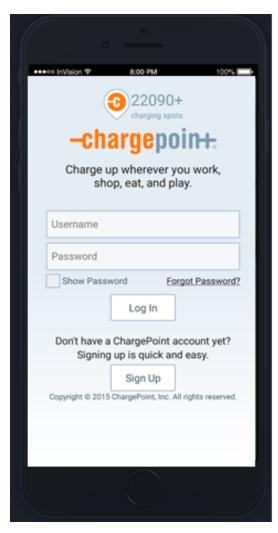

Activate your station

- + Turn on Bluetooth and WiFi
- Open the ChargePoint app. On the main menu, click Home Charger
- + Select "Set Up Home Charger"
- Select "Activate" and follow the instructions

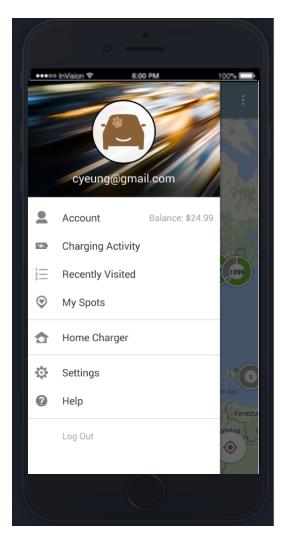

Activation of Home will allow you to schedule charging, start sessions remotely and set reminders so you never forget to charge. You'll be able to view and track all your residential, public and workplace charging in one place including energy usage and how many miles you've added during a charging session depending on your car. Plus, Home works with Nest to help you save on energy costs.

Home Station Activation – Mobile App

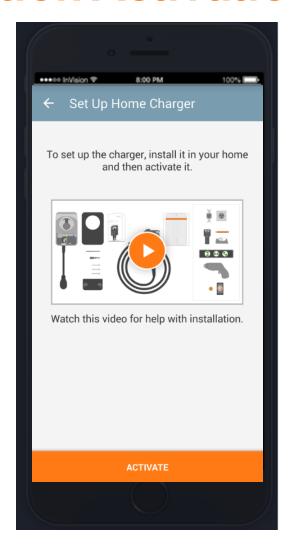

1. Sign in to ChargePoint Account on Mobile App

Home Station Activation – Select Home Charger

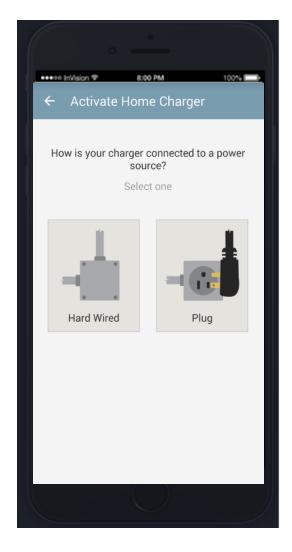

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger

Home Station Activation - Activate

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate

Home Station Activation – Select Power Source —chargepoints

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug

It is important to be accurate for this step. Choosing the wrong value might impact the power output of the station.

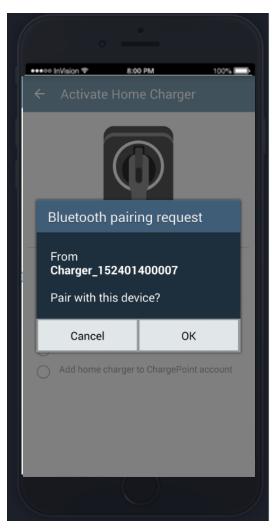

Home Station Activation – Select Amperage

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug
- 5. Select Amperage rating of the dedicated circuit (if Hard Wired)

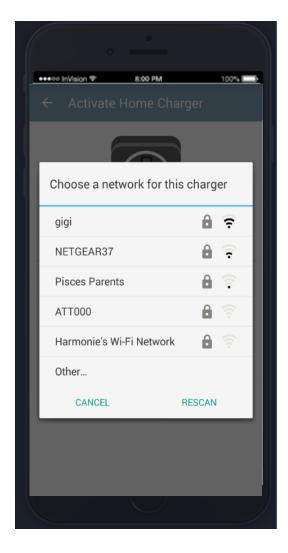

It is important to be accurate for this step. Choosing the wrong value might impact the power output of the station.

Home Station Activation – BT pairing

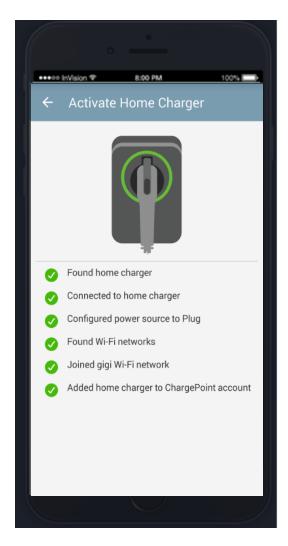

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug
- 5. Select Amperage rating of the dedicated circuit (if Hard Wired)
- 6. Confirm Bluetooth pairing request

-chargepointage Home Station Activation – Choose Network

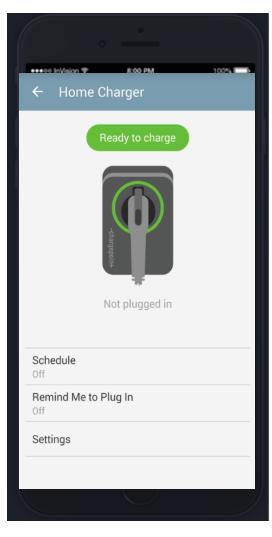

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug
- 5. Select Amperage rating of the dedicated circuit (if Hard Wired)
- 6. Confirm Bluetooth pairing request
- 7. Choosing a Network for the charger and enter password

Home Station Activation - Confirmation

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug
- 5. Select Amperage rating of the dedicated circuit (if Hard Wired)
- 6. Confirm Bluetooth pairing request
- 7. Choosing a Network for the charger and enter password
- 8. Station activation status screen will confirm successful completion of each step

Home Station Activation - Completion

- 1. Sign in to ChargePoint Account
- 2. Select Home Charger
- 3. Click Activate
- 4. Select the power source: Hard wired or Plug
- 5. Select Amperage rating of the dedicated circuit (if Hard Wired)
- 6. Confirm Bluetooth pairing request
- 7. Choosing a Network for the charger and enter password
- 8. Station activation status screen will confirm successful completion of each step
- 9. Activation Completed
