

# Incoming Patient Notifications

EMTrack™

Standards-driven field assessment tools help EMS identify at-risk patients and rapidly deliver targeted patient information to hospital clinicians.

## Rapidly Communicate Critical Information:

- Stroke
- STEMI
- Trauma
- Sepsis
- Pain and Glasgow Coma Scales
- Vital Signs and Lab Results

EMTrack provides secure data capture for multi-organizational responses involving patients, evacuees, and general population movement tracking.

Typical usage includes daily and mass casualty incident patient tracking, medical operations support during public events, evacuations and shelter management, and vaccination clinic and point of distribution tracking.

The flexible and proven solution is easily integrated with related technologies and provides mobile applications that can operate in both real-time and off-line environments.

## Improved Hospital Outcomes:

- Alert Appropriate Staff
- Reserve Treatment Rooms
- Mobilize Resources
- Streamline Patient Hand-Offs
- Reduce Time-To-Intervention
- Improve Health Outcomes
- Communicate with Field
