

SMART SECURITYEDUCATION SECURITY COMPETENCE FOR YOUR ENTERPRISE

SIMPLE, SUSTAINABLE AND HIGHLY PRECISE

- ▶ Effective Cyber Security training, delivered in a flexible and efficient manner.
- Interactive deployment of Cyber Security training material at precisely the right time.
- Reduce the risks and associated costs of cyber attacks.
- ▶ Enable rapid response to security incidents, in order to mitigate the impacts.
- Document the implementation of protective measures meeting compliance such as GDPR, HIPPA, PCI.
- Target specific users, and groups through targeted, contextual training material.
- Utilize your own media formats, including logo, text, graphics and colors.
- Additional interactive trainings in the form of high-quality Cyber Security campaigns are available.

With DriveLock Smart SecurityEducation your employees will become an additional firewall for the protection against cyber attacks.

REDUCE THE HUMAN RISK POTENTIAL

The most successful attacks on corporate networks are carried out through social engineering operations, which exploit predictable human behavior in cases of fear, curiosity or convenience.

Studies have shown, the dangers and costs associated with a successful attack, can be significantly reduced through appropriate training measures for employees. These trainings are usually very costly and neither effective nor sustainable, as they are rarely conducted in direct relation to a related attack. Very often, employees perceive them as unnecessary, disturbing or annoying, and they don't require the active cooperation of all people involved.

DriveLock Smart SecurityEducation on the other hand is a simple, flexible, continuously available online or offline, centrally managed solution. Employees can receive specific information on the correct behavior, and the necessary security measures that should be applied during certain activities, for example, when inserting a USB stick or connecting to a Bluetooth device Security Awareness Campaigns may be presented.

Through this direct connection, the illustrated regulations will be ingrained in users behavior. A simple method to improve the security awareness of your employees is to conduct Security Awareness Campaigns once a week or once a month with the help of **DriveLock Smart SecurityEducation** training can be automatically displayed on the computer after login.

In the event of a security incident, appropriate behavioral measures can be published immediately throughout the company. Allowing you to minimize exposure and limit the extent of the damage.

You can flexibly set up the **DriveLock** Security Awareness Campaigns according to your needs: targeting specific user groups, network environments, computer groups or specific time periods. Thereby, allowing the option to select the most suitable communication format from a variety of delivery forms: Unformatted or formatted text, images or graphics, PDF documents, videos or existing websites from the intranet or internet. If you already have your own media items, you can integrate them quickly and easily.

This ensures a target-group-oriented, and thus effective communication. You can decide whether an employee can skip the displayed content, or whether it must first be viewed completely, and even if it needs to be confirmed.

For a CISO, the requirement to provide evidence for compliance audits couldn't be simpler. At the same time, this will document the implementation of protective measures as required by the GDPR, HIPPA and PCI.

DriveLock Security Awareness Content (Add-On)

High quality awareness training – Contains curated campaigns for various IT security topics, in different lengths, ranging from short training courses in the form of a videos, through complete e-learning training with test questions and a final knowledge check. This Security Awareness Content enhances the security campaigns of DriveLock Smart SecurityEducation and includes content for the following topics:

- Data protection-compliant handling of information
- Behavior and reporting in case of unusual incidents
- Secure handling of user accounts, e-mail and passwords
- Use of mobile devices in the enterprise (BYOD)
- Secure working outside of the corporate network
- Detection and behavior in case of phishing or malware attacks
- Proper handling of data in the cloud
- Opportunities for attacks through social engineering

Integrated tests offer an opportunity to verify the learning success immediately and independently. Gaining a deep insight into the corresponding topics successful delivery.

Additional content is available as part of a subscription, continuously updated, supplemented by new and current topics, and made available to you centrally and automatically via the **DriveLock** Enterprise Server. This high-quality training content is also available as an add-on for existing DriveLock customers who are already using Security Awareness Campaigns.
