

ADVANCED WORKSHOP OF INTRAUTERINE SYSTEMS

PROGRAM OVERVIEW

The Advanced Workshop of Intrauterine Systems provides a practical introduction to this advanced procedure. The workshop will give you a step by step guide to the procedure and valuable insight into the safety guidelines you need to know to avoid complications. You will learn what equipment is necessary to achieve the best outcomes for your patients, with the opportunity to practise on simulated models. This workshop will also demonstrate how to plan patient counselling with an analysis of patient case scenarios. It will enable you to seriously consider this advanced procedure for your practice. HealthCert recommends further clinical training for this highly sought-after service; referrals to clinical trainers are available.

The workshop can be completed individually or as stage 3 of the Advanced Certificate of Clinical Procedures.

WHO SHOULD ATTEND

This advanced workshop is designed to meet the needs of general practitioners who are interested in performing IUS insertions and removals in the primary care setting. The workshop is for general practitioners only and assumes previous experience in clinical procedures.

DELIVERY FORMAT

The program is designed as a face-to-face workshop supported by online materials. The one-day workshop is delivered on Sundays and includes presentations and demonstrations from an expert in the field, followed by practical, hands-on application using medical grade models. Online assessment in the form of multiple choice questions will take place after the workshop.

FURTHER STUDIES

This advanced workshop may be credited towards the HealthCert Advanced Certificate of Clinical Procedures. Further available advanced workshops in clinical procedures include the Advanced Workshop of Non-Scalpel Vasectomy and the Advanced Workshop of Joint Puncture and Soft Tissue Injections.

Optional clinical attachments are available for IUS procedures. These clinical attachments are an opportunity to see an expert performing IUS insertion or removal and other female reproductive procedures such as insertion or removal of contraceptive implants. General practitioners have the opportunity to observe the expert in action, ask questions and seek guidance.

INTRAUTERINE PROCEDURES

TOPICS COVERED

- The correct steps in the process of intrauterine procedures
- Recognising the safety rules to avoid complications during procedures
- Determining the necessary equipment for procedures
- Planning patient counselling
- Analysing patient case scenarios
