

ADVANCED WORKSHOP OF NON-SCALPEL VASECTOMY

PROGRAM OVERVIEW

The Advanced Workshop of Non-Scalpel Vasectomy provides an introduction to this advanced procedure for permanent male fertility control. The program is ideal for doctors who are already performing traditional vasectomies but would like to learn the non-scalpel procedure. HealthCert highly recommends further clinical training for those without prior vasectomy experience.

The only program of its kind in Australia, the workshop will teach what equipment is necessary to achieve the best outcomes for your patients, with the opportunity to practise the procedure on simulated models and enable you to seriously consider this advanced procedure for your practice. The program will also provide a valuable insight into the safety guidelines you need to know to avoid complications and demonstrate how to plan patient counselling with an analysis of patient case scenarios.

The workshop can be completed individually or as stage 2 of the Advanced Certificate of Clinical Procedures.

WHO SHOULD ATTEND

This professional workshop has been designed to meet the needs of general practitioners who are interested in performing vasectomies. The workshop is for general practitioners only and assumes previous experience in clinical procedures.

DELIVERY FORMAT

This program is designed as a face-to-face workshop supported by online materials. The one-day workshop is delivered on Saturdays and includes presentations and demonstrations from an expert in the field, followed by practical hands-on application using medical grade models. Online assessment in the form of multiple choice questions will take place after the workshop.

FURTHER STUDIES

This advanced workshop may be credited towards the HealthCert Advanced Certificate of Clinical Procedures. Further available advanced workshops in clinical procedures include the Advanced Workshop of Intrauterine Systems and the Advanced Workshop of Joint Puncture and Soft Tissue Injections.

One-day optional clinical attachments for non-scalpel vasectomy are available after this workshop if associated online materials have been successfully completed. The clinical attachment is an opportunity to observe an expert performing non-scalpel vasectomies, ask questions and seek advice.

NON-SCALPEL VASECTOMY

TOPICS COVERED

- The correct steps in the process of non-scalpel vasectomy procedures
- Recognising the safety rules to avoid complications
