

## Summary of Project

### COMPANY DESCRIPTION

Preca Brummel is a family business, Italian leader in children's clothing brand thanks to brands Brums, Bimbus and Mek. Founded in 1951 by Giovanni Prevosti as a small textile workshop in Carnago ( Varese ), today employs over 400 people. In Italy its distribution network includes privately owned retail outlets, franchise and wholesale and is now expanding its presence in foreign markets.

### DEMAND OF PROJECT

Preca Brummel had the need to redesign the structure of SAP authorizations, which were designed during the initial installation of the ERP. In the years these have been modified and extended in a timely and deconstructed to respond to individual and specific needs authorization of the business.

### AGLEA'S METHODOLOGY

By choosing Aglea as partner for the management of SAP security, Preca Brummel has redesigned the authorization procedure, aligning the profiling with its organizational structure and to improve the efficiency of the maintenance of the same

Preca Brummel is Italian leader in children's clothing brand thanks to brands Brums, Bimbus and Mek. The historical and main branch is in Carnago; It has a network comprising over 350 sales brand stores, as well as many multi-brand outlets and a number of corner in some centers of large retailers. It is also developing a network of stores abroad in Eastern Europe, in middle east and in the US.

In Preca Brummel updating user permissions is a process managed by the IT department within the company.

User profiling was defined at the same time as the initial implementation project of SAP in the company and run after responding to individual and specific business requirements. By the time therefor profiles have become laborious to maintain and have stopped to reflect precisely the organizational structure of the company and the tasks take on responsibility from the users. Preca Brummel has therefore decided to initiate a draft revision of profiling to adjust the authorizations on the current context and introduce the necessary flexibility to deal with future changes.

## The Solution

After evaluating several solutions Preca Brummel has chosen Aglea company as partners to plan the SAP security. Aglea redesigned permissions defining what in literature is called "Authorization Concept", and introducing the use of the SAP organizational standard structure linked to the HR world. This has improved the management from IT and the raising awareness of business on these issues . The winning approach was the methodology used by Aglea, based on previous experience of the company, as well as the active cooperation and preparation/expertise of the IT staff of Preca Brummel. These factors have allowed us to achieve excellent results of the project and significantly reduced lead times, ensuring the continuity of business.
