

SOLUTION SPOTLIGHT

Eliminate the risk, realise the business benefits...

With the ever-changing digital landscape we live in today, your critical applications are hosted and accessed from many locations - historically, multiple solutions can help protect these, but this creates complexity. With our expert team, you can experience the benefits of Commvault technology by test-driving our purpose-built appliance - which minimizes complexity by protecting all your data and applications wherever it resides, data centre, edge or cloud - managed and protected in a single, easy to use console.

To help show that consolidation of data protection platforms is possible, while protecting all your data and applications, we offer a risk-free proof of concept service to any organisation looking to move data protection providers. Our hassle-free solution is delivered as an on-premises appliance, powered by Commvault technology - designed, implemented and supported by the experts at COOLSPIRiT, which offers a unique hands-on experience.

Data and applications are the lifeblood of any organisation. Run a PoC with COOLSPIRiT and we will show you how to simplify your data management tasks.
