

Curing Data Management and Storage Cost Issues

Liverpool School of Tropical Medicine

Cloudian HyperStore Object Storage Platform chosen for NAS Offload, Backup and Collaboration

Liverpool School of Tropical Medicine (LSTM) is the world's oldest institution dedicated to research and postgraduate teaching in the field of tropical medicine. It has been training leaders in global health since 1898 and today works collaboratively in over 70 countries to fulfill LSTM's mission of improving the health of the world's poorest people.

Based in Liverpool in the UK, the I.T. department support research activities in Africa and around the world. As demand for data volumes and resulting storage costs continued to grow, LSTM began looking for a more affordable storage solution. After consulting with the expert team at COOLSPIRiT who introduced Komprise data management software to assess its storage infrastructure, LSTM determined it could reduce its costs by offloading data from its expensive NetApp NAS system to Cloudian HyperStore.

HyperStore delivers limitlessly scalable object storage with the industry's most advanced S3 compatibility, geo-distribution for easily managing storage across multiple sites and a range of other data management features—all at up to 70% less cost than traditional storage offerings.

"For our long-term data management/hybrid cloud strategy, we wanted a solution that was scalable and can compete with increased data demands. With Cloudian, we no longer have to worry about our storage system impacting on our researchers ability to collect and analyse data."

David Rooke

Head of IT Services, at LSTM

About Cloudian

Cloudian is the most widely deployed independent provider of object storage systems, with the industry's most advanced S3 compatibility and an extensive partnership ecosystem. Its award-winning flagship solution, HyperStore, provides limitless scalability and cloud-like technology, flexibility and economics in the data center. Cloudian's global data fabric architecture enables enterprises to store, find and protect object and file data seamlessly across sites, both on-premises and in public clouds, within a single, unified platform.

About Komprise

Komprise analyzes, moves and manages data across your storage to give instant savings of 70%+ without any disruption. Plan storage capacity, identify and transparently archive cold data, create a low-cost DR copy, migrate data and shrink backups with Komprise. The modern architecture uses no storage agents, no static stubs, and no changes to the hot data or metadata paths. Komprise creates no storage lock-in, has no scaling limits, requires no dedicated hardware, and is priced at a fraction of the alternatives.

About COOLSPIRiT

COOLSPIRiT have been providing data management solutions and business critical infrastructure for over 20 years. We are dedicated to the performance, protection and preservation of enterprise data and we take the time to listen to our customers and find out about their businesses. Only then can we solve their problems with solutions that employ the very latest technology.
