

Bulletproof Ransomware Protection with Hybrid Storage-as-a-Service at the Edge

Problem

Ransomware attacks can be devastating, and almost inevitable. You have invested in risk mitigation and standard data protection. However cyber criminals seem to always be a step ahead. As ransomware attacks against enterprises are expected to grow, you worry that your traditional storage solutions can't meet the challenge.

Solution

ClearSky Data's innovative approach to cloud storage-as-a-service leverages the network edge to deliver air-gapped solution for ransomware protection that provides:

- » Built-in security and data protection
- » Instant recoveries and unlimited recovery points
- » Cost-effective multi-cloud storage
- » No cloud egress fees for data access
- » Reduced storage TCO by more than 50%
- » Guaranteed 99.999% data durability
- » Guaranteed 99.999% uptime

Business Continuity at No Cost

Single cloud storage-as-a-service with built-in offsite data protection that leverages innovative snapshot technology and the network edge architecture.

Fast Data Recovery

Near-instant RPO/RTO after a ransomware attack or disaster. No data copying or replication. No data restoration.

Cost Reduction

Reduced on-premises storage footprint, management, and associated cost. You pay only for one durable copy of your data and for the storage capacity you use.

With our solution, you can:

Restore access to files quickly and avoid ransom payments

Prevent the loss of systems, data and productivity

Ensure business continuity with storage-as-a-service leveraging the network edge

Reduce storage-related costs by 50%

Protect your brand
