

# Security Assessment Services

COMPASS IT COMPLIANCE

## Vulnerability Assessments

Automated testing evaluates specific systems and devices for known weaknesses:

- Internal and External Vulnerability Scanning
- Identifies technical vulnerabilities in computers and networks
- Identifies weaknesses in policies and practices related to the operation of these key systems

## Penetration Testing

Using Vulnerability Assessment results, our Security Analysts attempt to bypass identified weaknesses to determine:

- How a system might be compromised.
- Where additional safeguards are needed.
- Severity of weaknesses identified in a specific system or application.
- Remediation plan to mitigate

## Social Engineering Assessments

A comprehensive set of tests designed to establish the current state of your personnel's security awareness and help identify:

- Gaps in Policy and Procedure
- Enforcement of Policies
- Security Awareness Training
- Remediation Strategies

Compass IT Compliance offers IT Security Assessment services that are designed to help you identify security weaknesses before they can be exploited.

Compass' IT Security Assessment services are performed by experienced professionals using industry proven methods and tactics. These tests are designed to identify threats, including:

- Data Vulnerabilities
- Hardware and Software Vulnerabilities
- Transmission Vulnerabilities
- Configuration Errors
- Risk Associated with Human Error

Compass IT Compliance Security Assessment testing can be of a general nature to identify risks presented to your organization or can be focused on a compliance regulation, such as:

- FFIEC/GLBA
- PCI
- HIPAA/HITECH
- FISMA/NIST
