

Phishing Assessment Services

Phishing attacks remain one of the top threats to organizations across in all industries, regardless of size. Most data and security breaches are the result of an initial instance of human error, and not a technical exploit. Look at it from an attacker's perspective; it requires far less effort to send out a bunch of fraudulent emails hoping somebody clicks the link than it does spending a lifetime searching for a vulnerability in a firewall. Technical exploits can be patched, but you can never patch human error.

Simulated phishing tests are an essential component of an organization's information security program. Your employees are the first line of defense when it comes to mitigating your risk of a data breach or ransomware attack. For that reason, a successful phishing assessment plan includes three main components:

Train

Administer physical or computer-based security awareness training to all staff who will have access to technology in their role

Test

Testing staff via simulated phishing attacks will heighten awareness of ongoing threats and create a culture of security within your organization

Repeat

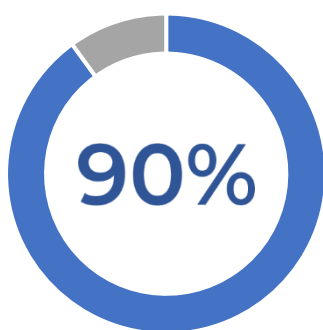

Administer training and simulated phishing emails to all staff on a recurring basis, with additional training for those who fail assessments

Compass IT Compliance will manage your entire phishing program from start to finish. Our Security Experts will create custom phishing campaigns based on the needs and requests of the client. They will then provide the client with detailed reporting that includes:

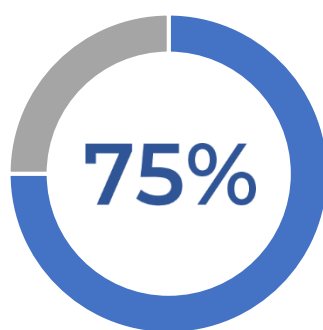

- ✓ Quantity of emails sent per simulated phishing campaign
- ✓ Percentage of users who clicked a phishing link
- ✓ What credentials they shared or downloads they allowed
- ✓ Overall baseline reporting to show trending and improvement over time

Completely Customizable Programs

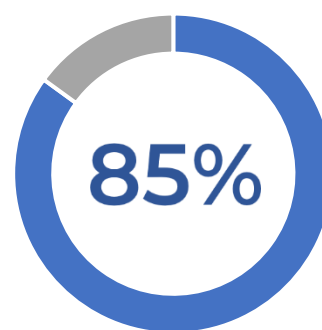

Our phishing assessment programs are far from a one-size-fits-all solution. Compass IT Compliance will customize phishing emails to fit your unique requirements. You may want the email to tempt employees with free concert tickets, or maybe design it to look like an urgent request from management. Users who click a simulated phishing link can then be directed to complete additional security awareness training, which comes included with this service. Compass IT Compliance can also assist in setting up an email-integrated phish alert button that allows users to forward suspected email threats to your security team for analysis while removing the potentially harmful email from the user's inbox, all with just a few clicks!

90% of data breaches include a phishing element¹

Up to 75% of security incidents stem from a lack of knowledge by staff²

Users clicking on mobile phishing links has increased by 85% since 2011³

Recurring phishing simulation and training programs continue to be a leading factor in establishing a culture of digital security and privacy within organizations, mitigating the risk of breaches and incidents. Compass IT Compliance is a dedicated IT security partner with the knowledge and experience to manage your phishing assessment program. We strongly believe in the quality of our phishing simulations and will offer a free round of customized phishing emails to prove their effectiveness. Contact us today to learn more about our comprehensive phishing assessment programs!
