

How Intelligent Capture and Process Automation are Changing the Game

CHALLENGE:
How do you manage **the rising tide of information** in your organization?

OMG! 175 zettabytes of data each year by 2025 ¹

20% of data is structured ²

80% of data is semi-structured or unstructured ²

67% of organizations report that less than half of their processes are automated. ³

Only **12%** of organizations surveyed are using Intelligent Automation. ⁴

SOLUTION:
This is how to manage **unstructured data** at scale.

Intelligent Capture combined with **Process Automation** technologies including Workflow, RPA and Decision Management will optimize the transformation of your document intensive processes.

Use **Intelligent Capture** to classify unstructured content and extract valuable structured data.

Good data is critical to Process Automation Initiatives and **Intelligent Capture provides you with good data.**

Use **Workflow** to provide orchestration of your processes and collaboration with human and digital workforces.

Use **RPA and Intelligent Automation** to provide a digital workforce that automates repetitive tasks and frees up employees to do higher value work.

Use **Decision Management** to automate business rules and increase decision speed.

BENEFITS:
These are ways **intelligent capture and process automation** can help your business.

Increased Employee Productivity

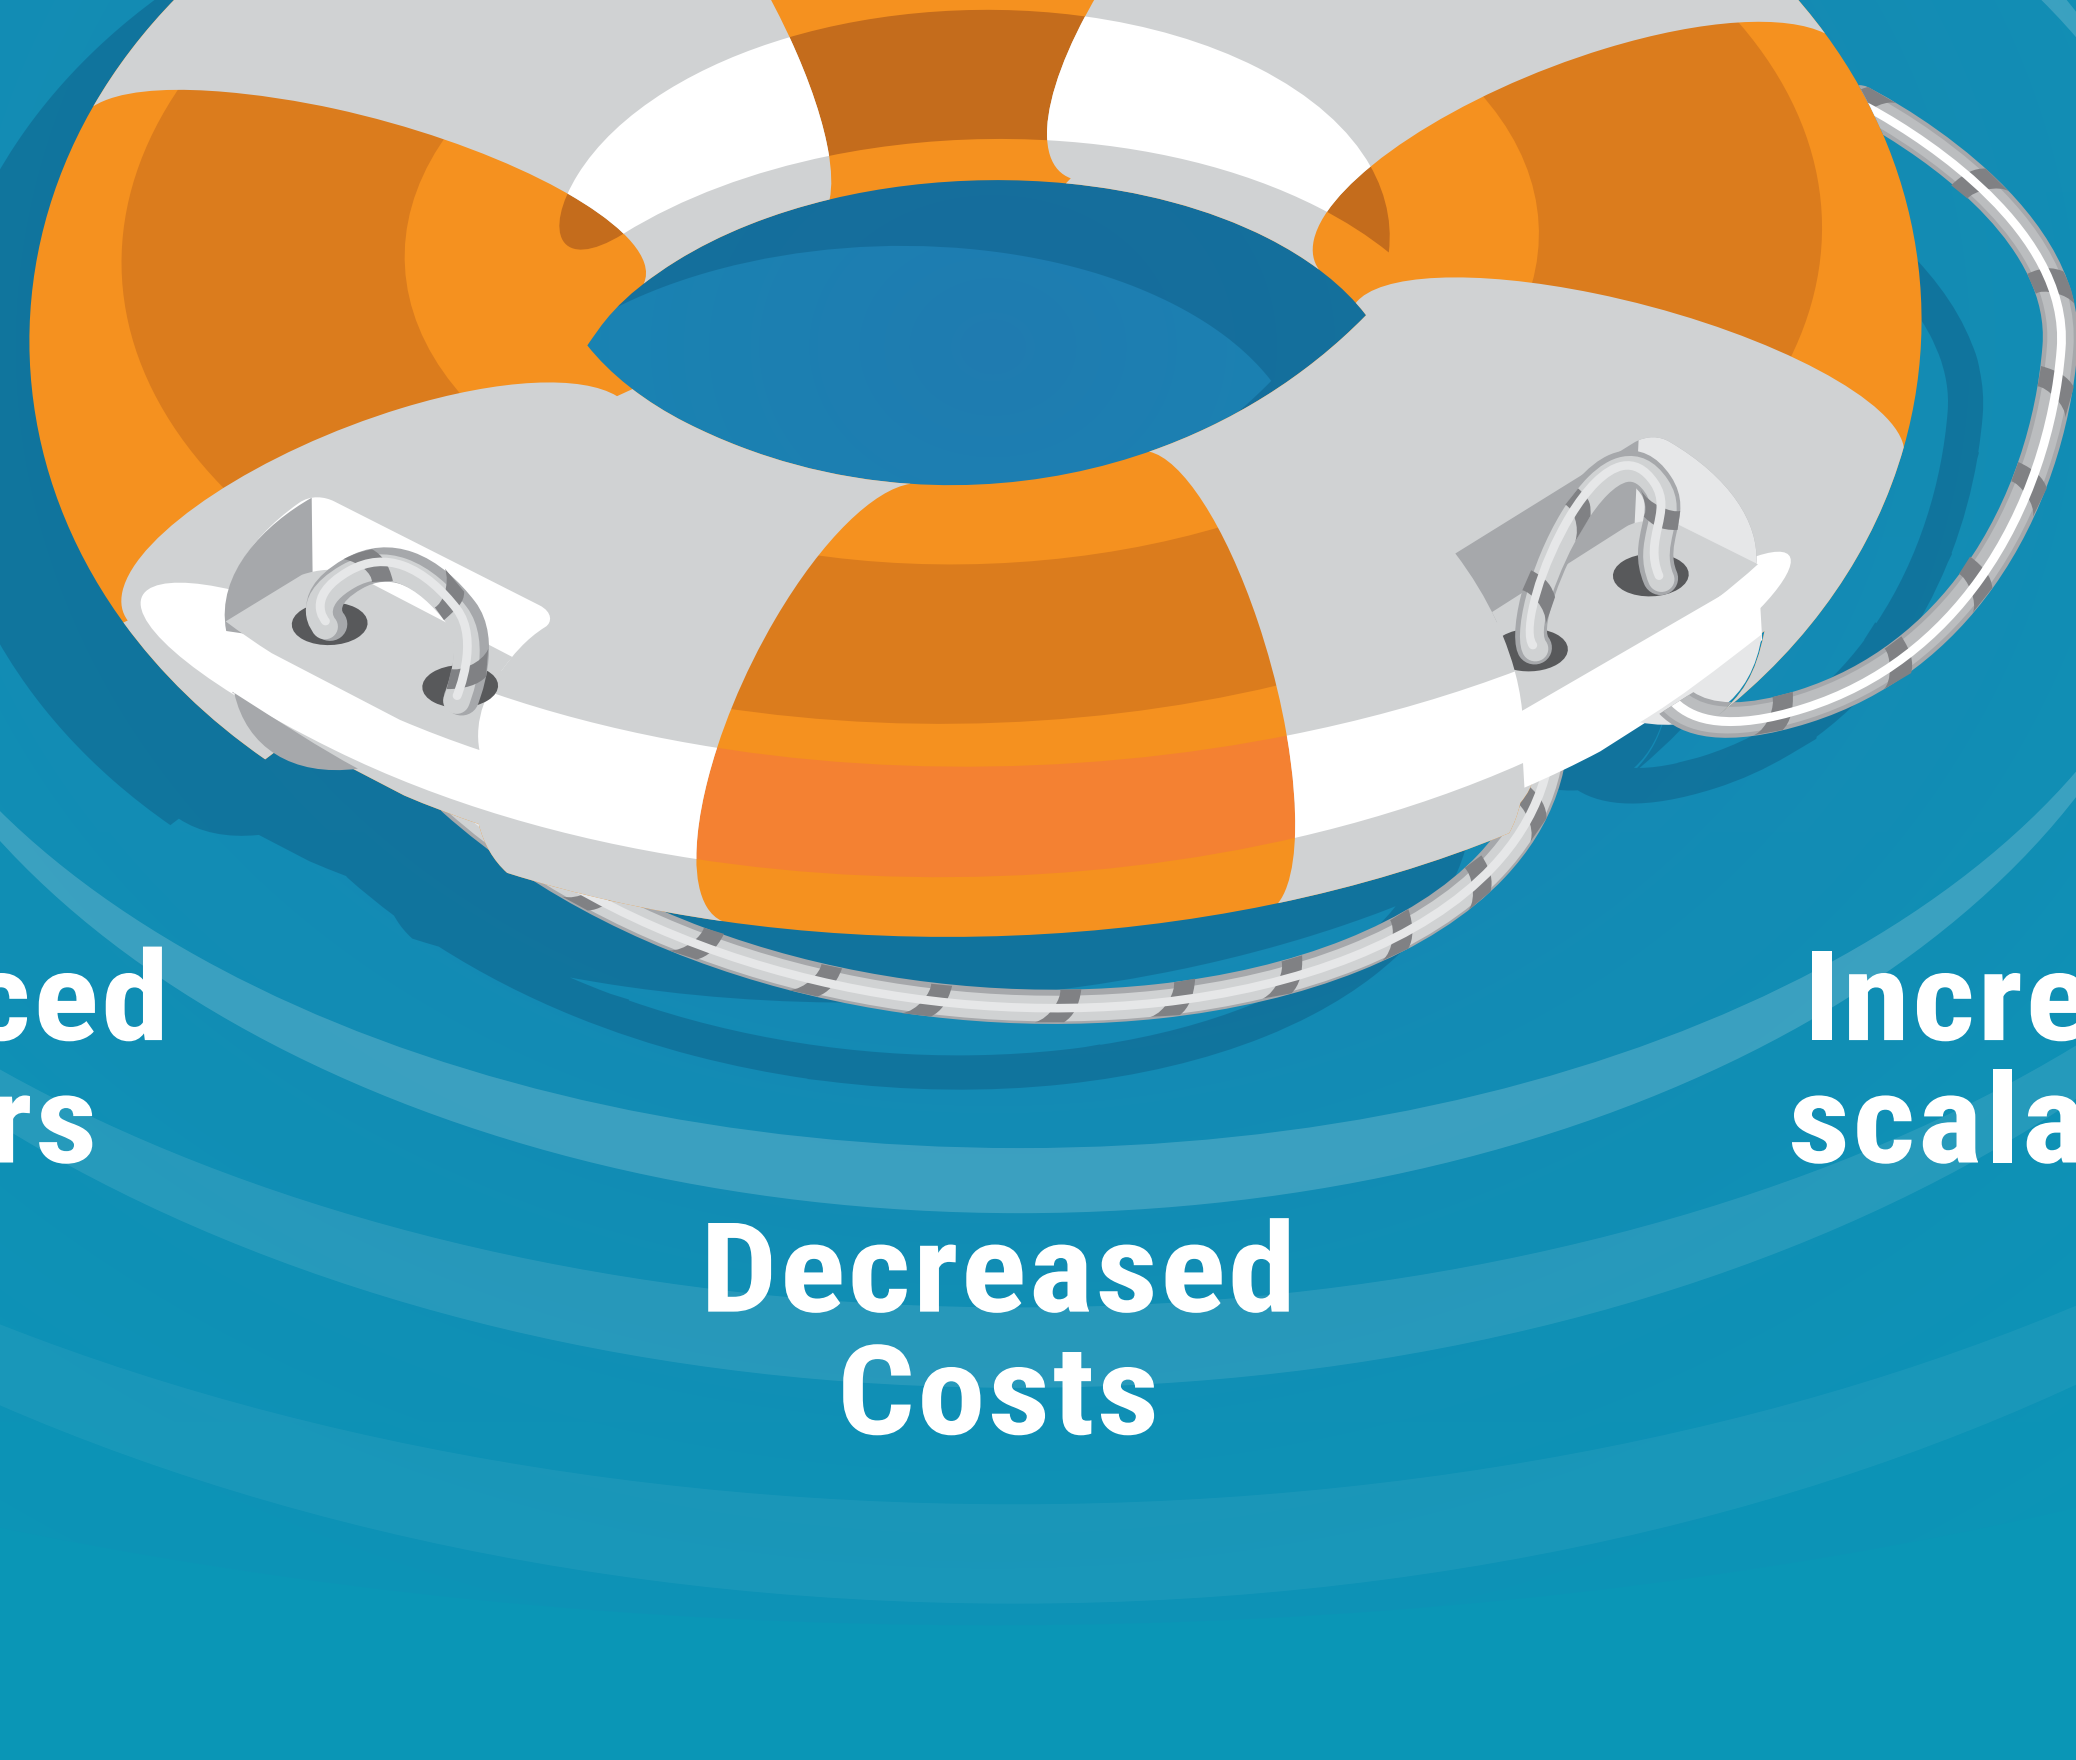

Improved Cycle Times

Improved Compliance

Reduced Errors

Decreased Costs

Increased scalability
