Palindrome Word Search Key

Palindrome sentences can be read the same forward and backwards with punctuation, capitalization, and spaces usually ignored and/or rearranged. For example, look at the classic "Madam, I'm Adam." Now try reading it from the last letter to the first, changing the spaces and punctuation between the letters in your mind as you do so that it reads the same when read as written.

Below are some palindromic sentences for you to fill in the missing letters on the blanks to complete.

Never od	·
no pets.	
No lemons,	·
t on evil.	
Too bad I h	<u> </u>
, Boston.	
Rise to v,,,	
·	y metal worm.
Was it a r	?
	,, s aloof as a bard.

Palindrome Sill-in-the-Blank Key

Palindrome sentences can be read the same forward and backwards with punctuation, capitalization, and spaces usually ignored and/or rearranged. For example, look at the classic "Madam, I am Adam." Now try reading it from the last letter to the first, changing the spaces between the letters in each word in your mind as you do so that it reads the same when read as written.

Below are some palindromic sentences for you to fill in the missing letters on the blanks to complete.

Neverod<u>d</u><u>o</u><u>r</u><u>e</u><u>v</u><u>e</u><u>n</u>. Never odd or even. _S__t__e__p__o__n_ no pets. Step on no pets. No lemons, <u>n o m e l o n</u>. No lemons, no melon. <u>Live</u>n<u>o</u>tonevil. Live not on evil. Too bad I h_i_d_a_b_o_t. Too bad I hid a boot. <u>Not</u>, Boston. Not so, Boston. Rise to v<u>o t</u><u>e</u>, <u>s</u><u>i</u><u>r</u>. Rise to vote. sir. <u>M</u>r.<u>Owl</u>ate</u>my metal worm. Mr. Owl ate my metal worm. Wasitar<u>a t</u><u>l</u><u>s</u><u>a</u><u>w</u>? Was it a rat I saw? <u>D</u>rabas a fool, as aloof as a bard.

Try this math experiment:

Take any 2-digit number (example: 12) and add it to the numbers reversed (example: 21). Is the answer a palindrome? In this case, yes:

12 +21 33

However, this isn't always the case and you may need to repeat the reversing process over and over again to reach a palindrome number. For example:

87
+78
165
+561
726
+627
1353
+3531
4884

Using the Palindrome Numbers Chart and the above method, fill in the color key at the top then color the corresponding squares to indicate which numbers are already palindromes, which only take one step addition to become palindromes, 2 steps, and so on. (Note: there are no 5-step palindromes for the numbers in this chart.)

Use the space below to speculate which numbers you think will take the least number of steps and which will take the most.

When you have finished coloring in the chart, use this space to record your observations of patterns you see as well as if your speculations above were correct.
