Astra Schedule

Do you ever wonder if there's a more efficient way to manage all the events on your campus? Are you maximizing the usage of your classrooms while also meeting instructional needs? The key to maximizing your schedule's success is having complete visibility into all your campus resources and understanding their usage. Astra Schedule provides a lens into all your scheduling needs.

Astra Schedule integrates bi-directionally with student information systems (SIS) to analyze and optimize space, time, and instructional resources. It also offers unparalleled visibility into the schedule and allows you to test and evaluate changes before you modify your master schedule.

CALENDARS

Complete visibility into all of your events, academics, and resources in one calendaring tool. If managing your classroom and event scheduling has led to conflicts and time-consuming scheduling practices, it's time to bring them all together and manage both space and scheduling with Astra Schedule.

REPORTS

Improve your schedule with data-informed decisions. Astra Schedule features a repository with 100+ reports. Whether it's an events list, section list, calendar list, or other defined parameters, users can monitor utilization and deliver business intelligence.

OPTIMIZER

Create more efficient schedules with the optimizer, a tool that gives users the opportunity to model different schedule scenarios in a sandbox environment. Users can run models on enrollment fluctuations or test different scenarios. This process helps generate an optimized schedule that can be edited prior to publishing.

EVENTS

Astra Schedule can help to manage your institution's events by providing greater visibility with event calendars and views.

By pairing Astra Schedule with Platinum Analytics and third-party systems, this tool can elevate the schedule and greatly benefit your students and campus.
