Voicebrook to Exhibit at APF Pathology Coding & Practice Management Seminar

Voicebrook to demonstrate accurate reporting tools that support billing for services.

Lake Success, NY, April 07, 2015 --(PR.com)-- Voicebrook, Inc. will be exhibiting at the American Pathology Foundation Coding and Practice Management Seminar April 9-10, 2015 at the JW Marriott Buckhead in Atlanta, Georgia. This seminar will provide information about upcoming coding changes and billing requirements to ensure that Pathology laboratory management teams are prepared as they face unprecedented pressures and changes in the industry.

Voicebrook will demonstrate their VoiceOver® solution, which features reporting options that maximize the efficiency and accuracy of Pathology reports. Built-in templating tools help to standardize reports around diagnostic and billing standards and help ensure that laboratories will get compensated appropriately without delay.

Tami Abell, Director of Product Management says, "VoiceOver offers a number of features that assist laboratories with their billing. Using speech commands, the Pathologist can compare and edit billing and diagnostic codes while reviewing the report". She continues, "these tools and workflows can help practices maximize the completeness of their report and billing return. In addition, we have found that the majority of our clients demonstrate a six to 18 month return on investment, which also helps to alleviate some of the financial pressures that laboratories face."

About Voicebrook: Voicebrook is the industry leader in Pathology speech recognition and reporting solutions. It's software, VoiceOver, empowers Pathologists to save time, money, and lives. VoiceOver integrates directly with all AP/LIS systems, offering tools for customized reporting options. VoiceOver utilizes Nuance Communications Dragon® Medical 360 speech recognition technology and adds AP LIS specific "personalities" to maximize efficiency and improve accuracy while decreasing report turnaround times. VoiceOver streamlines pathology reporting by offering customized templates for gross and microscopic report sections and provides the current CAP eCC checklists in the Structured Results Entry (SRE) module.

Voicebrook's team of speech recognition and pathology experts combine their industry knowledge to ensure that solutions offered will support the real life issues facing Pathology professionals today. For more information, please visit www.voicebrook.com.
