

REGIONAL COMMERCIAL LINES INSURANCE CARRIERS

Proactive Risk Management

BACKGROUND

With the number of motor vehicle crashes increasing nationwide, regional commercial lines insurance carriers that specialize in providing coverages for transportation companies are struggling to remain competitive.

CHALLENGES

Regional carriers have offered UBI or telematics-based programs to augment their driver safety programs. There has been limited success with this approach as the vehicle data that is collected is reviewed with the driver several hours or days after their route is completed.

SOLUTION

Our solution coaches the driver in real-time when an event happens to help them avoid crashes and improve their driving habits. It also provides automated urgent notifications to their managers when risky patterns are spotted.

KEY RESULTS AND BENEFITS

- 10% - 30% loss cost reduction
- Increasing transparency into the account risk profile
- COVID-19 exposure mitigation and compliance
