

WORKERS' COMPENSATION INSURANCE CARRIERS

Proactive Risk Management

BACKGROUND

Workers' Compensation claims frequency and severity continue to rise for commercial fleets. As a result, workers' compensation carriers are focused on finding new ways to improve driver safety, curb losses and deliver superior experience to their commercial fleets.

CHALLENGES

Driver education programs provide short-lived impact. External factors such as distracted drivers on the road cannot be effectively controlled. With increased demand for deliveries, drivers spend more time on the road.

SOLUTION

The dreyev technology makes use of advanced machine vision and behavioral AI to provide real-time relevant and adaptive driver alerts based on the evaluation of driver responsiveness and attention states.

KEY RESULTS AND BENEFITS

- 10% - 30% loss cost reduction
- Decreased number and/or severity of crashes
- Continued driver coaching and safety monitoring
