

New Features for Time and Billing Professional Version 4.05

The 4.05 version of Time and Billing Professional has been enhanced with a new work code feature.

Disable Work Codes

The Work Code Maintenance window now contains the **Disable Work Code** field. Check **Disable Work Code** to mark a work code as disabled. If a user selects a disabled work code in the Time and Expense Entry window, the user will be notified that the work code is unavailable and the field will be cleared. (See page 125 of the *Time and Billing Professional Manual* for more information.)
