

WAN Failover Service

NETWORK BACKUP | POS & NETWORK UPTIME

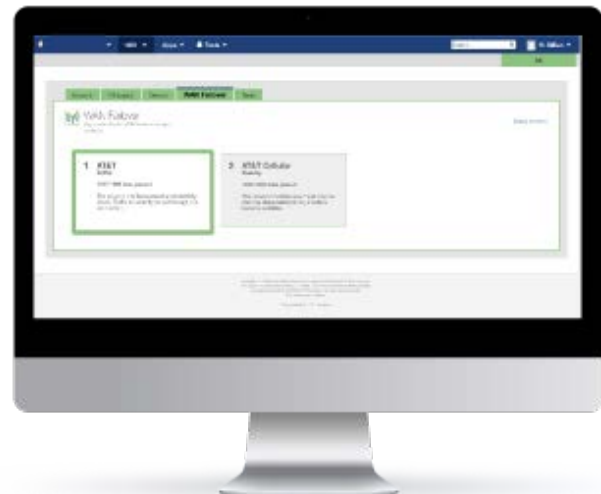

WAN FAILOVER BENEFITS

- Prevents payment processing disruptions and loss of revenue
- No manual intervention required
- Automatic failover software app comes loaded on your Merchant Gateway.
- Ensures uninterrupted network connectivity for your entire network

Every Merchant Gateway from Acumera is Dual WAN Failover ready. The failover application which provides WAN circuit backup simply needs to be activated in order from the AcuVigil Dashboard.

WAN Failover requires a secondary wired or wireless connection, which is not included in this service. However, Acumera will source and set up your back-up connection with our Managed Broadband Service.

For more information on this service:
acumera.net/managed-broadband

WAN Failover is visible and managed in the AcuVigil Dashboard:

- Set email and text alerts to notify both your team as well as Acumera's Network Operations Center (NOC)
- Get notified when connections have failed over to your back-up connection, and when your primary connection is restored
- Monitor the status of every location's primary and secondary connections

Local Internet service is a cost-effective and reliable network connectivity option. It's far less expensive than T1 or MPLS, and just as reliable, but providers' networks occasionally experience disruptions. WAN Failover defends your stores from downtime so you never miss a payment, and your customers are always delighted.
