

MICROBE SHIELD

The Microbe Shield technology guarantees optimal freshness and hygiene for textiles with continuous coverage for the life of the product. AEGIS Microbe Shield is a fabric treatment that combats odor-causing bacteria by means of a physical mechanism.

The Microbe Technology integrates a non-migrating permanent nano-coating onto the fibers that is specially designed to deactivate microorganisms. This means it is safe for you, safe for your environment, but deadly to unwanted microorganisms.

In addition to its odor-fighting properties, AEGIS® is chemically bound to the fabric surface and does not migrate into the environment.
