

# SILPURE

Silpure uses the power of silver to bring long-lasting antibacterial properties to your textiles. This unique patented antimicrobial product contains ultra-fine silver crystals that release silver ions at a controlled rate only when the conditions for bacterial growth exist. Through careful control of the size and shape of the particles during production, Silpure avoids the fabric discoloration that can occur with other silver antimicrobial products.

Silpure is a simple-to-use antimicrobial treatment that provides long-term, cost effective protection against unwanted odors. Offering excellent compatibility with other textile finishes, it is typically co-applied by padding with other auxiliaries. This means that no additional processing steps are required. Applicable for both synthetic and natural fibers, Silpure is durable to multiple washes, lasting the useful life of the treated article.

Ultra-Fresh guarantees personal freshness in garments, and extends the life of textile products by inhibiting the growth of undesirable bacteria, mold and mildew.
