

# REPREVE

REPREVE is a brand of recycled fiber that is made from recycled materials, including used plastic bottles. Because it offsets the need to use new resources, such as petroleum, and emits fewer greenhouse gases, REPREVE helps provide a reprieve for the planet. As a leader in transforming recycled bottles into a quality textile fiber, REPREVE is the ingredient that makes your favorite brands sustainable.

It started with one simple idea: to make REPREVE one of the most earth-friendly fabric ingredients in the world. It took us years to develop our proprietary process. Since then, we have transformed more than 4 billion recycled bottles into REPREVE fiber—resulting in many amazing products consumers know and love.
