

TACTEL

Soft. Light. Surprisingly strong.

Throughout the global textile industry, INVISTA's TACTEL® fiber is well known and valued for its wide range of benefits. A dynamic, specialty fiber, TACTEL® fiber creates garments that are soft, supple smooth, breathable and lightweight.

According to rigid testing, TACTEL® fiber is at least twice as soft and 20 percent lighter than most other fibers. It also dries eight times faster than cotton. In addition to being soft and lightweight, TACTEL® fiber is strong. The inherent strength of TACTEL® fiber enables the production of fabrics that are three times as strong as those made with natural fibers.

Because of its soft and light-weight nature, TACTEL® fiber is widely used in women's intimate apparel. TACTEL® fibers are also used in a vast collection of men's, women's and children's clothing and even accessories.
