

# TENCEL

TENCEL® branded lyocell fibers from the house of Lenzing are of botanic origin made by extracting material from raw wood. Fiber production itself is extremely ecofriendly, due to a closed loop system. On the day that the TENCEL® fibers were invented, a new chapter was written in the history of fibers. Textiles of TENCEL® fibers are more absorbent than cotton, softer than silk and cooler than linen.

TENCEL® branded lyocell fibers deal with moisture like no other. The fibers absorb moisture completely and naturally and then release it to the outside. Compared to synthetic fibers, the optimum moisture transportation of TENCEL® fibers is unique. The fibril structure of the fibers helps create an optimal skin climate due to the superior moisture absorption.

With TENCEL® fibers, the formation of bacteria is significantly reduced. Moisture is immediately transported into the inside of the fiber. Thus, no moisture film, which can sustain bacterial growth, forms on the fiber.

COOL + CLEAN + COMFORT
