

# COOLMAX

Patented and inherent fiber technology for quality and certified comfort, combining superior air flow and moisture wicking properties to create a breathable climate controlled sleep surface.

Coolmax® fabrics are specially designed to provide superior moisture management. The specially-engineered fibers using Coolmax® fabrics provide enhanced breathability that differentiate Coolmax® from generic polyester fabrics, which use standard round fibers.

The performance of Coolmax® is inherent in the fiber structure itself and requires no chemical treatments. The high-tech fabric wicks away moisture from the body, dries faster, and keeps cool while staying soft and comfortable.
