

FERAN ICE

Feran Ice combines and creates a comfortable, cool and fast drying sleep surface through advanced finish to fiber technology.

Feran Ice Improves moisture transport leading to better distribution of the moisture on the mattress fabric surface. As a result, the evaporation performance of the mattress fabric increases and it dries much quicker, maintaining a fresh sleep environment. The drying process requires heat, which is extracted from the ambient air or skin. Since the moisture evaporates from the mattress fabric and not on the skin, a pleasant cooling effect arises.

Benefits of Feran Ice include:

- Soil-release properties
- Permanent hydrophilic properties
- Optimum wicking and capillary effects
- High functionality and antistatic properties
- Constant moisture transport away from the skin
